INTRODUCTION

This eighth annual report provides a statistical view of how the city is progressing on various issues. These trends provide a snapshot of important issues in and around Santa Fe, by providing annual data.

The report begins with a look at recent growth in the city and surrounding region, then addresses housing, water use, and transportation along with other issues. There are many issues that can be measured within a city or region. This report focuses on one or two measurements for each topic.

City staff collects readily obtainable information. This streamlines the process of producing and updating the report. However, it is recognized that different types of measurements may be important to add in future reports.

The “Census Stats” section at the end of the report includes a map of urban area census tracts.

Numerical Goals for Trends

A few of the trends in this report are supplied with numerical goals or projections, usually stated in the city’s General Plan. Some cities have convened citizen task forces or committees to develop measurable goals or thresholds to provide a target for the city to achieve. Numerical targets can help focus the actions of city government and other community agencies.

A Word About Data

Numbers and statistics can be very useful, but they can also seem bewildering. While charts and graphs cannot explain the essence of a city as experienced by its citizens and visitors, numbers and data do provide us with insights that are important in our efforts to steer a positive course for our city. Readers can look at the trends of the various topics and develop a better knowledge of how well the city functions and performs.

Santa Fe and Tourism

Santa Fe attracts 1 to 2 million visitors each year. Area hotels, motels and bed and breakfasts offering 5,600 rooms generate approximately 790,000* occupied room nights annually. The combination of day visitors and overnight visitors increases the city’s population significantly, especially during the summer months.

Trends discussed in this report should be read with the understanding that the large amount of tourism relative to Santa Fe’s size may affect various issues, such as housing prices and crime. The city’s outstanding record on water conservation and air quality is remarkable when considering all of the city’s visitors.

*Room nights data taken from “Rocky Mountain Lodging Report.”

SUMMARY STATS

(For 2004)

Santa Fe Population	<u>US Census 2000</u>	<u>Jan. 1, 2005</u> (Estimates)
City	62,203	65,800
Urban Area	79,100	83,100
Central Region	104,192	113,000
County	129,292	141,000

- **City size: 23,921 acres (37.4 square miles)**
- **City housing growth rate: 1.8% (566 new housing units, 57% of regional growth)**
- **Urban Area housing growth rate: 1.6% (627 new housing units, including city, 63% of regional growth)**
- **Regional housing growth rate: 1.9% (999 new housing units including City and Urban Area)**
- **Tierra Contenta: 222 new housing units (39% of all new residential construction in the city, and 22% of all new residential construction in the region during 2004)**
- **Median-priced single-family detached home (city): \$340,000 (MLS listings only)**
(outside city): \$316,661 (MLS listings only)
- **Median household income (city): \$44,600**
- **City water system demand: 9,537 acre feet, 112 gallons per person daily (An estimated 75,735 residents are City water system customers)**
- **Water system average annual supply: 11,600 acre feet**
- **Transit ridership: 533,000 passenger trips**
- **Santa Fe public high schools 2002-2003 dropout rate: 3.8%**
- **Cost of Living Index: 116 (U.S. average = 100)**

GROWTH

The discussion of growth in the Santa Fe area is divided into City Growth, Urban Area Growth, and Regional Growth.

City Growth

By the end of 2004 the city contained 23,921 acres of land (37.4 square miles) within its corporate limits. According to Census 2000, the city's population was 62,203 as of April 1, 2000. As a result, the city's population grew 1.1% annually during the 1990s. The city has an overall population density of 1,663 persons per square mile. Albuquerque has a population density of 2,483 and Las Cruces 1,426 persons per square mile.

Annexation

The City has annexed approximately 44 acres this decade. City annexations during the 1990s included Pueblos del Sol (147 acres, 1992), Carlos Rey del Sur (52 acres, 1994), Nava Ade (146 acres, 1995), and part of the Rodeo Grounds (75 acres, 1996). A total of 671 acres was annexed during the 1990s, increasing the city's size by 3%.

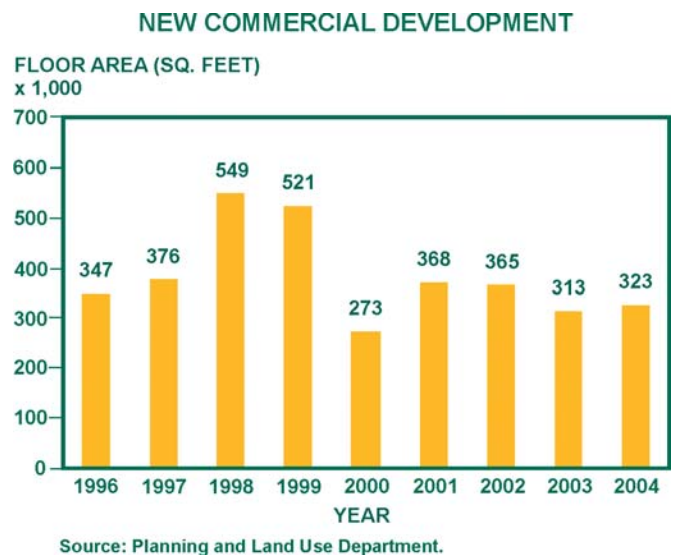

Commercial Development

The City of Santa Fe tracks new commercial (non-residential) development by permit. Since 1996, the city has added 3.4 million square feet of building floor area, including churches, community buildings, stores, offices, etc. The 9-year annual average is approximately 382,000 square feet of new non-residential building construction. Annual averages include approximately 130,000 square feet of new office space (33%), 187,000 square feet of new retail-related development (47%), and 50,000 square feet of new industrial/warehouse development (10%).

During 2004, the city approved 323,000 square feet of new commercial development, including an estimated 65,000 square feet of new office space and 44,000 square feet of new retail store development. New commercial construction included 100,000 square feet of additions to existing buildings, primarily in the institutional category including churches and schools.

Approximately 9-12 acres are developed for every 100,000 square feet of commercial floor area constructed. As a result, 309-412 acres of land have been commercially developed in the city since 1996, or an annual average absorption rate of 35-47 acres.

Urban Area Growth

The urban area, as shown on Page 5, includes the city and immediately surrounding land generally bounded by I-25 to the south and NM 599 to the west/northwest. The urban area includes 43,500 acres or nearly 70 square miles in all. Annual growth of new residences (housing units) in the urban area consists of new residential permits granted within the city, and new residential permits granted in the unincorporated parts of the urban area.

During 2004, an estimated 627 new housing units were permitted in the urban area (566-city, 61-county). This represents a growth rate of 1.6% in the urban area housing supply. The city added 566 new units, or 90% of all new residential construction in the urban area during 2004.

In September 2002, the city began a water offset program. Applicants with building permit requests that will increase water demand on the city’s water system (new homes, apartments, office buildings, etc.) must replace older toilets with new low flow toilets in existing homes and businesses that are also connected to the water system. The goal is that new construction will not increase net demand on the water system.

Regional Growth

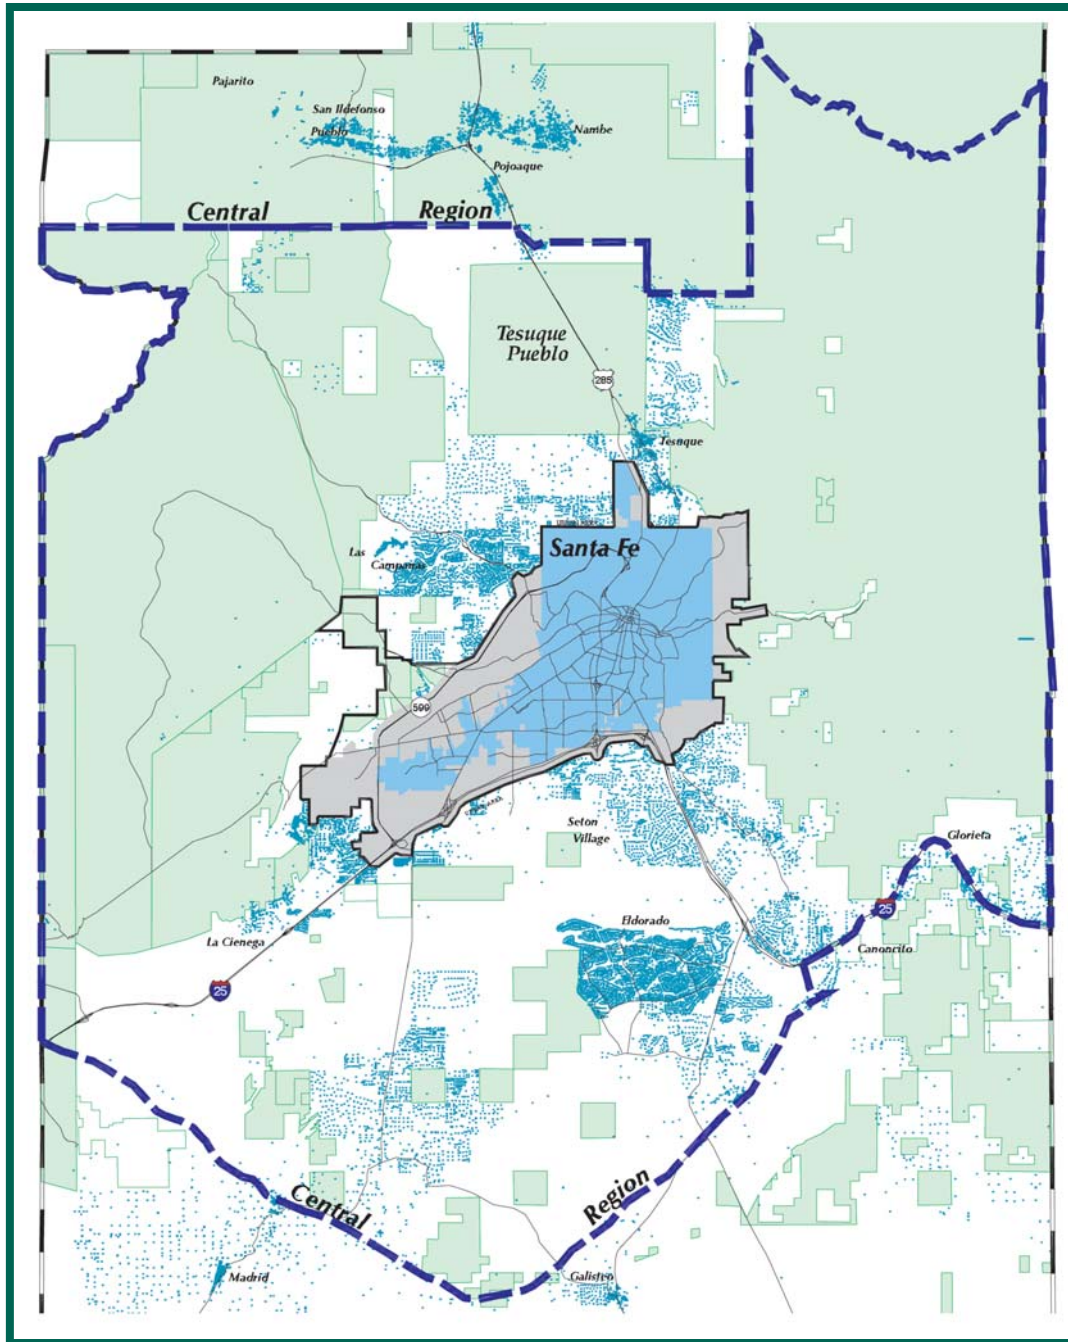

During the 1990s, 12,606 new housing units were permitted throughout the central region, including the urban area (See map on page 5). According to Census 2000, 8,006 new units were added to the urban area and 4,600 new units were added beyond the urban area inside the central region, or 64% and 36% of all regional housing growth, respectively, between 1990 and 2000.

In 2004, there were 999 new housing units permitted within the central region, including the city and urban area. This represents a 1.9% housing growth rate in the region. Census 2000 indicates that the central region (including the City of Santa Fe) was estimated to contain 104,192 residents and 47,459 housing units. During 2004, 372 housing units were approved for construction in that part of the region outside the urban area. This includes 135 new homes permitted in Rancho Viejo, 55 new homes in the Eldorado area, and 29 new homes in the Las Campanas area. Aldea de Santa Fe received permits for 59 new homes.

HOUSING

City government is actively involved in the local housing market. The city's affordable housing program has encouraged the construction of low-cost homes and rehabilitation of substandard units. This effort was spurred by decades of rapidly increasing home prices in Santa Fe that impacted a significant population of low income residents.

Affordable Housing

The chart below illustrates the number of new housing units constructed as affordable housing in the city annually. The figures include new single-family homes and new apartment units.

The city's definition of affordable housing means the monthly cost of a rental unit should not exceed 25% of the monthly income, for a family earning 80% of the area's median household income. The payments for a home should not exceed 30% of that household's gross income.

Since 1996, 1,473 affordable housing units have been built; 794 of these units are single family, mostly owner occupied. During 2004, 79 units (all single family units) were added to the city's affordable housing stock.

Tierra Contenta

Tierra Contenta is a city-initiated master planned community of 1,400 acres, approved for a total of 5,800 housing units. Tracking the annual growth of Tierra Contenta is important as it may continue to absorb much of the city's growth during the next ten to twenty years.

The chart below shows how many total housing units (owner-occupied and rental) have been constructed in Tierra Contenta since the first homes were built in 1995. Tierra Contenta's growth is compared to the city's total growth in new units.

Since its beginning, 1,777 new housing units have been built or permitted for construction in Tierra Contenta. This represents 33%, or one out of every 3 new homes built in the City since 1995. In 2004, a total of 222 new units were permitted for construction in Tierra Contenta, or 39% of the city's 566 new housing units.

HOUSING PRICES AND HOUSEHOLD INCOMES

Sources: Santa Fe Association of Realtors; National Association of Realtors; U.S. Bureau of the Census.
 *City staff estimates derived from Census 2000. (Using 2% annual increase.)

Housing Prices and Incomes

During 2004, the median sales price of homes listed in the Association of Realtors' Multiple Listing Service (MLS) jumped \$70,000 above 2003 and increased to \$340,000. Meanwhile, median household income in the city increased to an estimated \$44,600 in 2004.

The median price of single-family detached homes (new and existing homes) stabilized between 1994 and 1997. However, median prices of MLS-listed homes has dramatically jumped in recent years. The median price, shown in the above chart, is the average of the four quarterly median prices reported by the Santa Fe Association of Realtors multiple listing service.

The association cautions that the MLS medians may over estimate actual median prices in Santa Fe, because they do not reflect all home sales.

When median housing price statistics are combined with median household income figures, a Housing Affordability Index (HAI) is created. This index simply divides an area's median household income by the median housing price for the same year and arrives at a ratio. Higher ratios indicate greater affordability of single family homes. The index hit a 10-year low at .13 in 2004 suggesting that housing affordability is an increasingly acute problem in Santa Fe.

WATER

Water is an important issue to Santa Feans. The city's high desert location and periodic droughts make water a key component of growth management planning efforts.

One acre foot = 325,851 gallons
Source: Water Division. Actual water use figures have been rounded to nearest 100 acre feet to provide figures in graph.
*2004 figure does not include water use in Las Campanas, nor water use by the Santa Fe County utility.

During 2004, city water customers held overall water demand to an impressively low 9,537 acre feet - the lowest annual demand since 1988. When considering that the water system serves approximately 76,000 residents, the average water demand* dropped from 119 gallons per capita daily in 2003, to 112 gallons per capita daily in 2004.

The figures in the chart demonstrate the elasticity, or variability, of water use. Strong conservation efforts at home, work, and school, as well as pricing, can have a dramatic effect on the amount of water we use in our daily lives.

The city's water supply comes from three sources: reservoirs that collect and store mountain run-off from the upper Santa Fe River watershed, the city well field, and the Buckman well field. In wet years, the reservoirs provide 40% of the city's water supply. However, during 2002, the reservoirs produced only 740 acre feet, or just 7% of the total water supply. During 2004, the reservoirs produced 2,855 acre feet of water, or 29% of the City's 2004 supply.

In 2003 the city drilled four new wells #10-13 in the Buckman well field. In 2004, the State Engineer granted use of up to 1,500 acre feet of water from each of the four new wells. That decision has been appealed to state district court. The new wells will help reduce Santa Fe's vulnerability to drought.

The city and county governments are working together with area pueblos and several federal agencies to construct a major water diversion system along the Rio Grande. The facility is projected to be constructed and operating by 2008.

*Defined as the total amount of water used divided by the total population or number of dwelling units connected to the water system, divided by 365 days.

WASTE

The need to recycle and re-use both wastewater and solid waste is important in moving toward a more sustainable community in Santa Fe. The ability of the city to work toward recycling and re-use now will help provide more options for the future of the entire region.

Wastewater System

Along with water supply, an adequate wastewater system is necessary for a growing Santa Fe. New wastewater lines must be extended and old lines replaced. An important indicator of the city's ability to absorb future growth is comparing the wastewater treatment plant's daily capacity with the average daily amounts of wastewater that are actually generated.

Source: Wastewater Management Division.

In 2004, the city treated an average of 5.3 million gallons of wastewater daily, including a daily peak of 7.5 million gallons. The city has the capability to treat an average of 8.5 million gallons of wastewater per day, and instantaneous peaks of 12-13 million gallons at the wastewater treatment plant located north of the airport. The city's average daily flows have been as high as 7.0 million gallons per day (1995), but have since decreased due in large part, to water conservation efforts.

Using treated wastewater effluent, especially at the regional landfill and at the new city golf course, will help reduce future demand for potable water. This approach to the city's treated effluent will keep users of large amounts of water, such as landfills and golf courses, from relying on valuable drinking water, reserving it for human consumption.

Solid Waste/Recycling

During 2004, the City of Santa Fe's recycling program diverted approximately 2,900 tons of material from being dumped into the new regional landfill. Recycling is an important part of the community's efforts at creating a sustainable future. The amount of solid waste generated by the City and emptied into the regional landfill has increased from 90,000 tons to 113,000 tons during the last 10 years. The amount of waste recycled has ranged from 2,800 tons to 5,700 tons during the past ten years.

In 2003 and 2004, city-generated trash going into the landfill declined from previous years due to a decrease in trash being dropped off at the city's transfer station.

Source: Solid Waste Division; Caja del Rio regional landfill.
*Estimated city generated trash.

NOTE: The decline during 2003 and 2004 may be due to a decline in trash dropped off at the city transfer station.

TRANSPORTATION

Road congestion, the connection of existing roads, and the construction of new roads are some of the most controversial issues in Santa Fe. The General Plan proposes a number of new roads to be built in the future. A primary objective of the Plan is to “reduce automobile dependence and dominance.”

During 2004, the city completed work on the extension of Governor Miles between Nava Ade and Cerrillos Road, and rebuilt Old Pecos Trail from Arroyo Chamiso Road to Cordova Road. Traffic signals were installed at: Old Pecos Trail and San Mateo, at Jaguar and Paseo del Sol, and at Airport Road and Country Club Drive.

Traffic Calming Program

The city initiated a traffic calming program during 2002. That includes speed reduction improvements, such as speed humps, traffic circles, raised crosswalks and signage. During 2004 traffic calming projects were completed

along the following streets: Hopewell/ Espinacitas, Arroyo Chamiso, Botolph/Zia, Baca/Cristobal Colon, Monterey/Santa Cruz.

Traffic Volumes

The city’s major roadways are listed below with traffic volumes provided by year. In some instances traffic volumes are measured at different roadway locations. This may explain decreases in traffic volumes from one year to the next year. But the highest count along given roadways is used each year. Traffic counts for Siler Road and Osage have been added to the table below.

Road Congestion

The most congested roadways during the evening peak hours (4-6 p.m.) are estimated to be the following locations:

- Agua Fria, near Osage Avenue
- Cerrillos Road, near Second Street
- Old Pecos Trail, near Cordova
- St. Francis, near Siringo

TRAFFIC VOLUMES

(Average Weekday Traffic/24-Hours)

Source: Public Works Department.

TRANSIT

The city's bus system, Santa Fe Trails, began service in January 1993. "Passenger Trips" provides the most useful indication of how much the system is being used. A "Passenger Trip" is defined as one person riding one direction only (not roundtrip), including all transfers needed to reach a destination.

Source: Transit Division

In 2004, the concept of commuter rail took a step closer to reality, as the State of New Mexico purchased the Santa Fe Southern Rail Line between Santa Fe and Lamy. Also during 2004, the North Central Regional Transit District was established. This entity has the potential to plan for the coordination of various transit modes throughout Northern New Mexico in the future.

Urban Hike/Bike Trails

Since 1990, the city has constructed 7.25 miles of paved, off-road Hike/Bike Trails and another 12 miles of designated bike routes have been established along Siringo Road, Old Pecos Trail, Don Gaspar Avenue, Galisteo Street, and Yucca Street. In addition, another 5 miles of roadway along Rodeo and Airport Roads have been striped to easily accommodate bicyclists.

During 2004, the city added one-quarter mile of paved off-road trail along Botolph Road and one-half mile of paved hike/bike trail was added to the Arroyo Chamiso Trail east of St. Francis Drive.

Source: Parks and Recreation Department.

In 2004, an additional 4.75 miles of unpaved trails were constructed at Santa Fe Estates and along the Dale Ball Trail System.

While the City of Santa Fe contains 7.25 miles of hike/bike trails, the City of Flagstaff, Arizona currently contains 8.5 miles of paved, off-road trails and the City of Las Cruces, New Mexico has 12.5 miles of paved trails.

AIR QUALITY

The New Mexico Environment Department monitors Santa Fe’s air pollutants in three locations. Particulate Matter (PM-10) is monitored at the P.E.R.A. building near Paseo de Peralta and Old Santa Fe Trail, and at the Harold Runnels State Office Building at St. Francis Drive and Alta Vista Street. Carbon monoxide (CO) is measured at Fire Station #3 located on Cerrillos Road near Third Street.

Santa Fe’s air pollution levels fall well within the federal standards for acceptable levels of carbon monoxide and particulate matter. The chart below shows that the level of carbon monoxide dropped during the last decade. Since 1994 the monitored air pollutant levels have been much lower in Santa Fe. New Mexico Environment Department officials attribute this improvement to more fuel-efficient automobile engines.

The chart below shows the highest 8-hour average measurement of carbon monoxide in Santa Fe. The chart also indicates an average of the 5 highest 24-hour measurements of particulate matter. New federal standards for “fine” particulate matter (Pm 2.5) have resulted

in additional monitoring for particles 2.5 microns in diameter. In 2004 the average of the 5 highest 24-hour measurements of Pm 2.5 was 8.4 ug/m³, well below the EPA threshold of 65 ug/m³.

Particulate matter is often associated with air pollution created by smokestack industry, prevalent in the eastern parts of the nation. Throughout much of the west, particulate matter is little more than windblown dust and dirt. However, these natural particles can aggravate respiratory problems.

Greenhouse Gases

Greenhouse gas emissions represent another air quality issue for Santa Feans. Carbon dioxide and methane are the most prevalent gases representing a threat to our environment. In unusually high concentrations, these gases trap abnormal amounts of heat in the atmosphere – a process that affects the climate of the entire world, often referred to as “global warming.” Although these gases are naturally occurring, many events such as the burning of rain forests in South America are speeding up global warming. U.S. cities and worldwide industries are also contributors to this problem, primarily through carbon dioxide emissions from internal combustion engines.

AIR QUALITY

PARKS AND RECREATION

Park development in a growing city like Santa Fe is an important part of the overall quality of life, particularly for families with children. Parks have long been considered an integral part of city life. As Santa Fe grows, it will be important to follow and measure the progress the city makes in the development of new neighborhood and community parks.

PARK DEVELOPMENT (Neighborhood & Community Parks)

Year	Name (Acres)
1992	"Marc" Brandt (4.8)
1993	Las Acequias (5.1), Peralta (2.0)
1995	Franklin Miles (Additional 8.0)
1996	Wood Gormley* (2.5), Rancho Siringo (.5), Calle Alvarado (4.8), Frenchy's (14.1)
1997	Sweeney* (2.5), Cesar Chavez* (2.5), Pueblos Del Sol (9.0)
1998	Los Milagros (1.2)
1998	Ball fields developed at the MRC; Genoveva Chavez Community Center.
2000	Community Center.
2002	Espinacitas (.25), Entrada (.25), Rugby Fields at MRC (5.0)
2003	Plaza Entrada, MRC Trails (9.0 miles), MRC/Agua Fria (2.0 miles from San Felipe to MRC Rugby Fields)

*Soccer Field Developed at Elementary School

Source: Parks and Recreation Department.

During 2003, the city redeveloped Cathedral Park downtown and replaced the natural grass ball field with an artificial turf field at Salvador Perez Park. Over 11 miles of unpaved, crushed rock trails were completed at The Municipal Recreation Complex (MRC).

Park Acreage per 1,000 Residents

The amount of park acreage developed per 1,000 city residents is an important indicator that reveals how close Santa Fe is to achieving its own code requirements of providing a combined total of 5 acres of developed neighborhood and community parkland per 1,000 city residents.

TOTAL DEVELOPED PARKLAND PER 1000 RESIDENTS

Source: Planning and Land Use Department.

Since 1990, Santa Fe has maintained a range of 3.8 to 4.4 acres of developed neighborhood and community parkland per 1,000 city residents. As of 2004, the "developed parkland per 1,000 residents" ratio slipped to 4.3 acres.

The city contains approximately 280 acres of developed neighborhood and community park land, but needs a total of 329 acres of developed parks, or 49 additional acres, to meet the goal (5 acres x 65.8; 65,800 city population = 329).

The city opened the Genoveva Chavez Community Center in March, 2000. The indoor recreation complex includes an ice skating rink, an olympic size swimming pool, a children's swimming pool, a multi-court basketball and volleyball gymnasium, a weight training area and aerobics exercise areas.

PUBLIC SCHOOLS

The Santa Fe Public School District's success is important to the community's quality of life. Statistics provided include the district's high school dropout rate and district enrollment figures.

High School Dropout Rate

The dropout rate reflects the importance of education in the community and may be a factor in issues ranging from crime rates to economic development and corporate job location. The Santa Fe Public School District calculates annual "event" dropout rates for grades 9-12. During 2002-03, the district's rate dropped to an impressive 3.8% - the first time the district's drop out rate has fallen below the statewide rate in 10 years.

Some observers are beginning to measure the "cohort dropout rate", which tracks an entering freshman class and determines the percent that drop out during the four-year high school program. Ultimately, high school graduation is a fundamental stepping stone to lifelong economic opportunity. The 2002-03 school year dropout rate was 3.8% for the Santa Fe Public High Schools, the lowest level in ten years. The state-wide dropout rate for New Mexico during the 2002-03 school year was 4.5%.

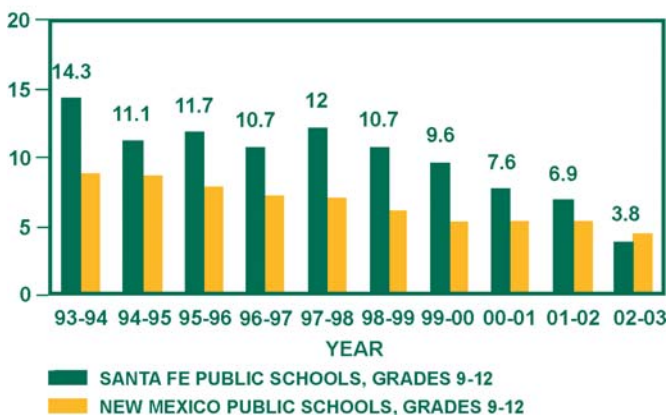

School District Enrollment

Tracking district enrollment provides an insight into the relative sizes of the elementary, middle school, and high school student populations. The year-by-year figures show changes at each level.

The number of elementary students has ranged from 7,431 during the 1995-1996 school year to 7,894 students during the 1997-1998 school year. Elementary and middle school, student numbers increased from the 03-04 school year to the 04-05 school year. The number of high school students also increased. Overall, the district experienced a net increase of 111 students from the 03-04 to the 04-05 school year, an increase of less than 1%.

The district's student population has ranged from 12,819 to 13,711 students during the past ten years. While growth of the student population district-wide is modest, the district has experienced much higher growth in certain parts of the district, most notably in the Airport Road area. Ramirez Thomas Elementary School opened in August 2003, with 516 students, absorbing students from Sweeney, Chavez and Agua Fria Elementary Schools.

ECONOMY

Employment and job statistics are reported for each county annually by the New Mexico Department of Labor. These statistics include total employment as well as unemployment rates. The employment figures are grouped according to major sectors of the economy, which include: manufacturing; mining; construction; transportation and public utilities; wholesale and retail trade; finance, insurance, and real estate; services and miscellaneous; and government.

Employed Persons-Santa Fe County

The chart below shows total employment levels for Santa Fe County residents by year since 1994. As of 2004, there are just over 70,000 county residents employed inside and outside the county.

Source: New Mexico Department of Labor.

Jobs in Santa Fe County

There are 61,100 jobs located in the county. Jobs by leading sectors include the following:

- Government (fed., state, local) - 17,400 (28%)
- Retail/Wholesale - 9,500 (16%)
- Accommodation/Food Service - 8,000 (13%)
- Health Care/Social Assistance - 6,140 (10%)
- Construction - 4,600 (8%)

Unemployment

One measure of the economic health and vitality of a region is the unemployment rate — those people actively searching but unable to find a job. Santa Fe County’s average unemployment rate for 2004 was 3.5% which was lower than the nation’s average rate of 5.6% and New Mexico’s rate of 5.5% (through October). While 70,100 county residents are employed, approximately 2,550 people are unemployed and looking for work during a typical month.

COUNTY UNEMPLOYMENT RATES

*Department of Labor records indicate that the 1998 unemployment rate for counties throughout the state were not reliable.

Gross Receipts

Economic activity within the city of Santa Fe generated an estimated \$2.8 billion in taxable gross receipts in 2004. The graph below shows taxable gross receipts in the city during the past ten years.

TAXABLE GROSS RECEIPTS

FIRES AND EMERGENCIES

The city began tracking “response time” to calls for fires and emergency assistance during 1998 using a new computer-aided dispatch system. This system will allow the city to analyze how quickly it responds to calls for help. Response time is a very important indicator to Fire/EMS departments nation-wide. It is a recommended goal that 85% of all calls for Fire/EMS assistance be responded to within 6 minutes. In many cases, help during the first 6-7 minutes is necessary in preventing major property loss and/or the death of a critically ill or injured person.

During 2004, the fire department responded to and fought 199 fires, the lowest number of fires in ten years. The city experienced 54 total structural fires in 2004. Brush and grass fires represent the most common fires in Santa Fe. Two deaths occurred as a result of fires in Santa Fe during 2004; one in an apartment fire and the other as a result of a fire in a vehicle.

Emergency medical responses comprise the vast majority of calls responded to by the Fire Department. During the 1990s, there was an average of nearly 6,100 EMS calls per year within the larger Santa Fe region. This equals an average of 17 calls each day. During 2004, the city’s fire department responded to 8,661 calls (24 per day) for emergency medical assistance. Each day the city responds to an average of four vehicle accidents requiring medical attention.

*The large increase in vehicle accidents in 2003 may be due to internal reporting procedures in the city fire department.

CRIME

Public safety and protection are vital to Santa Fe's quality of life. There are different ways to measure public safety. Tracking crime statistics in the city is a valuable tool in assessing public health and security.

The charts below provide annual crime statistics reported to city police. Crimes generally decreased during 2004. Burglaries, robberies and reported rapes all declined and homicides remained the same. There were also 5 suicides in the city in 2004.

The Federal Bureau of Investigation collects crime statistics and calculates crime rates. Santa Fe's 2004 crime figures can be adjusted to create a "per 100,000 population" rate. Santa Fe is compared to other U.S. cities of 50,000-100,000 population below. (Rates for other U.S. Cities are 2003 rates and are rounded.)

CRIMES PER 100,000 POPULATION

Homicide Rate: Santa Fe 3, other cities 4.6
Reported Rape Rate: Santa Fe 72, other cities 36
Robbery Rate: Santa Fe 110, other cities 145
Burglary Rate: Santa Fe 1041, other cities 788

CITY FINANCES

According to the city's 2004-2005 annual budget, the City of Santa Fe has financial resources of \$203 million. While the city receives nearly \$77 million in gross receipts tax revenue, only \$1.8 million of the city's total revenue comes from property taxes. Santa Fe has the lowest residential property tax rate of the 10 largest cities in New Mexico (Approximately \$621 of residential property tax per \$100,000 of market value).

The city's financial resources for the 2004-2005 budget year come from the following:

• Gross Receipts Tax	\$76,900,000	(38%)
• Lodger's Tax	\$6,800,000	(3%)
• Franchise Tax	\$2,400,000	(1%)
• Property Tax	\$1,800,000	(1%)
• Other Tax	\$1,400,000	(1%)
• Federal and State Grants	\$20,800,000	(10%)
• Fees (water, sewer, parking, etc.)	\$81,600,000	(40%)
• Fines, Licenses & permits	\$3,600,000	(2%)
• Cash Reserves	\$3,200,000	(2%)
• Other Sources	\$5,100,000	(2%)
TOTAL	\$203,600,000	

Bonds and Borrowing

The city borrows money through the sale of bonds. There are two primary types of municipal bonds that cities use to borrow money:

1. General Obligation Bonds – These bonds, approved by voters, pledge increased property taxes for the repayment of the bonds. By law, Santa Fe could issue general obligation bond debt up to 4% (currently \$89 million) of the total tax-assessed land value in the city. The city currently has no general obligation bonds outstanding, and last put this type of bond issue on the ballot in 1980.

2. Revenue Bonds – These bonds are issued by the city to borrow money secured by gross receipts taxes and other fees and revenues the city collects, such as water and sewer fees. Revenue bonds require city council approval, but generally not voter approval. Santa Fe relies entirely on revenue bonds to borrow money. The city currently has revenue bond indebtedness (outstanding principal and interest) of \$170 million.

- \$93 million - gross receipts revenue bonds
- \$61 million - water enterprise bonds
- \$16 million - municipal recreation complex (MRC) bonds

City officials have preferred to use revenue bonds because the financial burden to pay for these bonds is shared by residents and visitors through the purchase of goods and services. General obligation bonds, on the other hand, rely on property taxes and therefore place the burden on local residents.

City Staffing

The city spends approximately one third of its total appropriated funds on salaries and benefits for all employees. The city currently employs 1,678 individuals, of which 1,305 are full-time. The general fund supports approximately half of the city staff, while enterprise funds (i.e. water, sewer, transit), grants, and other funds directly support the other half.

Capital Improvements

“Capital Improvement” is a term that refers to construction projects initiated by the city. These improvements often include projects such as park development, new water and sewer lines, road construction and maintenance, as well as the building of new fire and police stations.

City spending for various capital improvement categories during 2004-2005 is represented in the graph below.

CAPITAL IMPROVEMENTS SPENDING
FY2004-2005

Sources: City Annual Budget; Public Utilities Department

The \$10.9 million appropriated for streets, highways, and sidewalks includes funding for the extension of Governor Miles to Cerrillos Road, and reconstruction of Old Pecos Trail between Arroyo Chamiso Road and Cordova Road. Another \$8.8 million was spent on improvements to the water system. The city is working with other area local governments to construct a major water diversion system along the Rio Grande that could cost \$100 million.

Capital improvements funding for the upcoming years will be focused on the water system and accessing the city’s San Juan-Chama water supply.

Cost of Living

The cost of living index measures local prices against a national average in several categories including food, housing, utilities, transportation, health care, and miscellaneous goods and services.

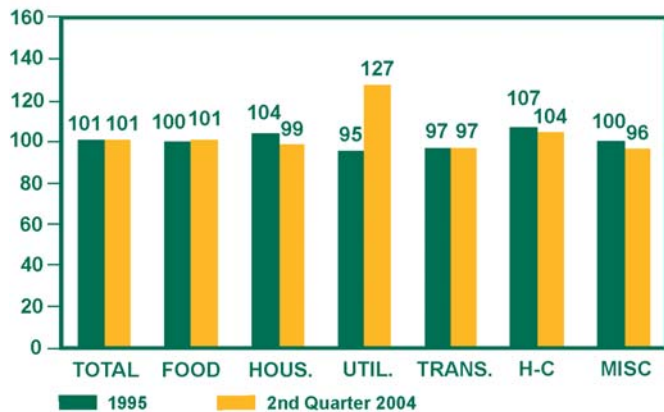

Santa Fe and Albuquerque are compared against the nation, as a whole, with a value of 100 being the national average. Cost of living figures for 1995 and 2004 (through June) are provided for each city. Values in the charts below are rounded to the nearest whole number.

CENSUS STATS

Population

The City of Santa Fe's population has grown very consistently since 1980 (see table below) adding 6,699 people between 1980-1990 then adding another 6,344 people between 1990-2000. The growth that many observe when they discuss Santa Fe has occurred outside the city limits. While growth within the city was steady during the last 20 years, growth on the city's fringe was not. In 1980 that portion of the urban area outside the city contained less than 3,000 people and just 7% of the urban area population. By 2000, there were nearly 17,000 people in that portion of the urban area outside the city, accounting for 21% of the urban area population. As the table indicates, even higher growth rates occurred outside the urban area.

Housing

The city's housing supply has grown by 50% since 1980, increasing from 20,154 units to 30,533 units in 2000. Housing growth rates can be very different from population growth rates, as can be seen by comparing the annual rates of increase in the tables below. For example, while the city's population growth rate was 1.1% annually between 1990-2000, the city's housing growth rate during the same period was double that pace at 2.2%. Smaller family size and more second homes used by part-time residents account for much of the difference.

The figures for each geographic area in the tables below include the figures from the geographic area directly above it (e.g. Urban Area figures include City figures).

POPULATION

	<u>1980</u>	<u>1990</u>	<u>2000</u>	<u>Annual Increase</u> <u>1990-2000</u>
