**CAPITAL IMPROVEMENTS ADVISORY COMMITTEE
CITY HALL, 200 LINCOLN AVENUE
CITY COUNCILORS CONFERENCE ROOM
THURSDAY, JULY 18, 2019, 3:00 PM**

1. CALL TO ORDER

The meeting of the Capital Improvements Advisory Committee was called to order by Rex Givens, Chair, at 3:00 pm, on Thursday, July 18, 2019, at City Hall, Councilors Conference Room, 200 Lincoln Avenue, Santa Fe, New Mexico.

2. ROLL CALL

MEMBERS PRESENT

Rex Givens
Monica Ault
Kim Shanahan
Marshall Thompson
Brian Lewis
Margaret Veneklasen
Isaac Pino
Vacancy

MEMBERS ABSENT

Jack Hiatt, Chair, Excused

OTHERS PRESENT

Noah Berke, Land Use Department, Staff Liaison
Sally Paiz, City Attorney's Office
Jennifer Jenkins, Consultant for Homewise
Elizabeth Martin, Stenographer

3. APPROVAL OF AGENDA

MOTION A motion was made by Mr. Lewis, seconded by Mr. Shanahan, to approve the agenda

VOTE The motion passed unanimously by voice vote.

**4. APPROVAL OF MINUTES
MARCH 14, 2019**

MOTION A motion was made by Mr. Lewis, seconded by Ms. Veneklasen, to approve the minutes.

VOTE The motion passed unanimously by voice vote.

5. DISCUSSION/POSSIBLE ACTION ITEMS

**A. REQUEST FOR FIRE IMPACT FEE ALLOCATION
REQUEST TO ALLOCATE \$218,267.00 FOR INFRASTRUCTURE
COSTS OF NEW FIRE STATION #2 (NEW SOUTHWEST, AGUA FRIA
STATION). Jan Snyder**

Mr. Snyder reviewed the packet information regarding this item. We have been working on this project for years and this has been on the CIP plan for over 5 years. As we talk today we are trying to find some extra money to cover additional costs to cover the difference between the previous design plan and the new design plan. We are trying to do our share. There are other players who are helping us as well. The cost estimate provided to you is the most current estimate.

Mr. Berke said this project was approved two months ago at Planning Commission so they have a development plan. The findings of fact and conclusions of law were approved at the meeting last week.

MOTION A motion was made by Mr. Lewis, seconded by Ms. Ault, to approve the request.

VOTE The motion passed unanimously by voice vote.

**B. TRAFFIC ENGINEERING DIVISION - RESOLUTION AMENDING THE
IMPACT FEE CIP 2020 - PEDESTRIAN CROSSING
REQUEST TO ADD THE FOLLOWING TO THE LIST OF ELIGIBLE
PROJECTS LISTED IN "PLANNED MAJOR ROAD IMPROVEMENTS,
2014-2020" (TABLE 80, PAGE 77) AND TO ALLOCATE THOSE FUNDS
TO THE PROJECT TO BE TAKEN AS A CREDIT TO THEIR ROAD
FEES AT TIME OF BUILDING PERMIT APPLICATION.
John Romero**

PROJECT NAME	LOCATION	COST ESTIMATE
Pedestrian crossing	Between Harrison Rd. and Paseo Corazon	\$44,917.00.

Mr. Romero said this is about addressing resident concerns regarding crossing Agua Fria in order to catch the bus. We contacted the developer and he said they are willing to construct the crossing so long as we give them the credits. That is why we are asking for this.

Chair Givens asked which developer is asking for this.

Mr. Romero said Homewise.

Chair Givens said he thinks we should recognize this is something that impact fee use was pioneered by Pulte. He thinks this is something he is going to vote in favor of it. He thinks it is okay. Impact fees are waived for developers in other cases.

Ms. Jenkins, representing Homewise, gave an overview of the Homewise project. When we sought approval and received approval there was no ask from the City for the pedestrian crossing. She got a call from Councilor Villarreal about concerns from some of her constituents. It was determined that this was the best location for the crossing. She was asked to go back to her client, Homewise, to ask them if this was something they would do. There was a discussion about the impact fee option which was a great tool for a public/private partnership. This is a developer who is willing to do something for the City in this manner.

Mr. Berke said this request is only for \$44,917 of the fees for the project. There will be a lot more impact fees than that from the entire project. They are only getting credits for this crossing. They will pay impact fees after they reach the amount of \$44,917.

Mr. Shanahan said his personal feeling is that anything being built should be paid for by the public so philosophically he is not in favor of this.

MOTION A motion was made by Chair Givens, seconded by Mr. Lewis, to approve the request.

VOTE The motion passed unanimously by voice vote.

6. INFORMATION ITEMS

A. QUARTERLY IMPACT FEE COLLECTION REPORT Noah Berke

Mr. Berke reviewed the report included in the meeting packet.

Mr. Berke said this is pretty self explanatory. You can see the trends as you review the numbers.

B. UPDATE ON CIAC AND DEPARTMENT STATUS

Mr. Berke said he sent out a memo stating that he was asked by the Land Use Director, Carol Johnson, to handle this committee for the foreseeable future. He will be the staff liaison for this committee. He apologized about the last minute change in the meeting date. One of the members has resigned. Scotty sent a resignation letter to the Mayor so the vacancy that exists is the Mayors designee. There were questions about the vendor who was to do the required plan that is due every five years. We got the bids back and this committee submitted their scoring. The Director asked that we hold off on deciding the vendor until we see what the staffing of this committee will be long term. At that time she will make a decision.

Chair Givens asked what is our timeline.

Ms. Paiz said the plan is supposed to be in place on August 28th.

Mr. Shanahan asked are there consequences to submitting late.

Ms. Paiz said she does not see any particular consequence to a late turn in. She does think we should focus on trying to not be too late. There is no mention of penalties. If we are not going to do it the Governing Body could issue a determination that there is no need for an update. That is a possibility if you would like to do that.

There was a discussion around extending Paseo Del Sol and Tierra Contenta.

Mr. Pino said he recognizes the role of staff, but the consultant would be doing the work. Why is it that she cannot see that. Is there some sort of plan to dissolve this committee.

Mr. Berke said he is not aware of any conversations about that. That is not the intent. This committee is extremely important to the City and what we do. The Director acquired Long Range Planning and other areas and we have had a huge turn over and reorganization. She is trying to find where this committee should sit within the staff organization chart. She had talked about having this in Public Works, but that is not going to happen. There is no capacity to have it in Public Works. If the Director says she wants this to sit in his Division he will be with the consultant the next day. That is why she has not moved forward with the consultant.

Ms. Paiz said this committee cannot go away. It is required by State statute.

Chair Givens asked does anyone on the committee have any suggestions as to where you would like to be housed.

There was discussion about this issue.

Mr. Lewis asked how long will the consultant process take.

Mr. Shanahan said one year.

Mr. Berke said he can work with Sally on the declaration by the Governing Body for the State.

Ms. Paiz read the statue language allowing the declaration that no updates are required at this time.

Ms. Ault said part of the reason is we could not get it started. She does not think the declaration is the answer. It does not seem honest. She thinks we need to get started.

Mr. Berke said he will convey the concerns to the Director at his weekly meeting with her tomorrow.

7. MATTERS FROM THE CHAIR/COMMITTEE/STAFF

None.

8. MATTERS FROM THE FLOOR

None.

9. ADJOURN

There being no further business before the Committee the meeting adjourned at 3:35 pm.

memo

DATE: June 26, 2020
TO: Capital Improvement Advisory Committee
VIA: Carlos Gemora, Land Use Planner Senior, Current Planning Division *CEG*
FROM: John Romero, Acting Public Works Department Director *JR*

ITEM AND ISSUE:

REQUEST FOR APPROVAL TO ALLOCATE UP TO \$500,000 OF ROAD IMPACT FEE FUNDS FOR THE CONSTRUCTION OF A SIGNAL AT BECKNER ROAD AND RICHARDS AVENUE.

BACKGROUND AND SUMMARY:

A condition of approval was imposed on the recently constructed Pulte subdivision off of Beckner Road requiring they connect Beckner to Richards Avenue. This connection was intended not only to serve Pulte as well as other Las Soleras traffic, but to provide traffic relief for Governor Miles from cut-through traffic. The connection has been built and is being notably utilized. Because of this, the Beckner/Richards intersection is experiencing noticeable operation and capacity issues.

Planning Commission recently approved the Villa Sendero Apartment Complex, located on the west end of Beckner Road near the Outlet Mall. A condition of approval was imposed on this development, requiring that they construct a signal at the intersection of Beckner/Richards, to mitigate the above mentioned issues. The condition of approval stipulates that the developer will receive impact fee credits for this improvement as the development itself is contributing very little to the issues at the intersection. These improvements are currently estimated not to exceed \$500,000. Requesting the Villa Sendero development to make these improvements is an efficient way to remedy the current issue.

RECOMMENDED ACTION:

The Public Works Department recommends the following

- Placement of the Beckner/Richards Signal Improvements, in the amount of \$500,000, on the Impact Fee Capital Improvement Project (IFCIP) list.
- Approval of Road Impact Fee credits for the Villa Sendero Development, not to exceed \$500,000, for the cost to construct signal improvements at the Beckner/Richards intersection.

APPENDIX G: CAPITAL FACILITY PLANS

PROPOSED IMPROVEMENTS FOR BECKNER ROAD / RICHARDS AVE
 SCALE: 1" = 10'

Land Use Department Planning Commission Staff Report

PASSED BY P.C. 1/23/2020

Case No: 2019-1330
PC Hearing: January 16, 2020
Applicant: JenkinsGavin, Inc., agent for
TA Las Soleras LLC
Request: Development Plan
Location: 5243 Beckner
Case Mgr.: Donna Wynant, AICP
Zoning: C-2 (General Commercial)
Pre-app.: September 26, 2019
ENN Mtg.: November 4, 2019
Proposal: Development Plan for a 252-
unit multi-family apartment
community

Case #2019-1330. Villa Sendero Apartments Development Plan. JenkinsGavin, Agent, for TA Las Soleras, LLC, Owner, requests Development Plan approval of a 252-unit multi-family apartment community on approximately 11.4 acres. The property is zoned C-2 (General Commercial) and is located at 5132 Beckner Road. (Donna Wynant, AICP, Case Manager)

I. RECOMMENDATION

The Land Use Department recommends **APPROVAL** with the conditions of approval as outlined in this report.

Two motions will be required in this case:

- Approve or deny the development plan for Case No. 2019-1330 subject to the required general findings, and subject to the conditions of approval and technical corrections recommended by staff in Section II and Exhibit A of this staff report.
- Approve or deny the Findings of Fact and Conclusions of Law for Case No. 2019-1330, as shown in Exhibit C of this report.

II. CONDITIONS OF APPROVAL

The following are conditions of approval for this project from the City's Development Review Team. The conditions and technical corrections are also listed in Exhibit A.

#	CONDITIONS OF APPROVAL	Dept/ Division	To Be Completed
1	The developer shall design a temporary signal at the Beckner Road/Richards Avenue intersection. The design shall be reviewed and approved by the Public Works Department.	Traffic Engineer	Prior to Recordation of Development Plan
2	The developer shall construct a temporary signal at the Beckner Road/Richards Avenue intersection.	Traffic Engineer	Prior to 50% Certificate of Occupancy
3	The developer shall receive impact fee credits for the cost to design and construct a temporary signal at the Beckner Road/Richards Avenue intersection. In order for these improvements to be eligible for impact fee credits, they must be included on the City's Impact Fee Capital Improvement Plan (IFCIP). If the IFCIP Advisory Committee and/or the City Council do not recommend placing these improvements on the ICIP, the developer will not be required to construct said improvements	Traffic Engineer	Prior to Construction Permits
4	This development shall comply with the most current requirements of the American with Disabilities Act (ADA) for all infrastructure improvements. A note on the development plan shall reflect this condition.	Land Use, Technical Review Division (Grading/ Drainage)	Prior to signature sheet process
5	An approved water plan and Agreement to Construct and Dedicate (ACD) from the Water Division will be required.	Public Utilities/Water	Prior to final plan approval.
6	Provide an easement and right-of-way dedication plat and record along with the development plan addressing the following: <ul style="list-style-type: none"> • Dedication of public right-of-way to the City of Santa Fe for the new right turn lane and sidewalk improvements on Beckner Road. • Dedication of public utility easements for the water and sewer lines. • Dedication of a public trail easement to the City of Santa Fe. 	Land Use Case Manager	Prior to signature sheet.

III. EXECUTIVE SUMMARY

The subject property is 11.4 acres of vacant land located on the south side of Beckner Road, a 92-foot wide public right-of-way, just east of the Santa Fe Fashion Outlet Mall at the southeast corner of Beckner and Cerrillos Road. The VA Clinic is located to the east, Interstate 25 to the south, and undeveloped C-2 property to the north. The subject property is not part of the Las Soleras Master Plan. The proposal includes

252 multiple-family units on 11.4 acres, which calculates at a density of 22.1 dwelling units per acre.

The proposed development plan requires Planning Commission approval as it will be new construction exceeding 10,000 square feet per Subsection 14-3.8(B)(3)(b). The Commission's review of this project will focus on compatibility with surrounding uses and consistency with applicable site design standards. Staff analysis concludes that the Project complies with all applicable sections of Chapter 14 for approval of a development plan.

Should the Commission approve this application, the development plan will be recorded and the project will proceed to construction permit review. No other public review procedures apply to this project.

IV. EXISTING CONDITIONS

Direction	Property	Zoning
North	Vacant land	C-2 (General Commercial)
East	VA Clinic & PNM Substation	C-2 (General Commercial)
South	I-25	Unzoned public right-of-way
West	Santa Fe Outlet Mall	C-2 (General Commercial)

V. PROJECT DESCRIPTION

The size and breakdown of the 252 units and other buildings are as follows (as shown on the Site Details page DP1-1 in the Applicant's plan set.):

UNIT AREAS: (INCLUDES HEATED AREA PLUS EXTERIOR STORAGE)						
UNIT TYPES:	DESCRIPTION	AREA	QUANTITY	HEATED(H)	STORAGE(S)	(H) + (S)
1	1 BR / 1 BATH	714 SF	114	81,396 SF	1,632 SF	
2-2.1	2 BR / 2 BATH	1,021 SF	96	98,016 SF	2,112 SF	
2-2.2	2 BR / 2 BATH	1,037 SF	24	24,888 SF	1,272 SF	
3	3 BR / 2 BATH	1,190 SF	18	21,420 SF	450 SF

City of Santa Fe, New Mexico

memo

DATE: December 17, 2019
TO: Lee Logston, Senior Planner
FROM: John J. Romero, Engineering Division Director *J*
CASE: 2019-1330: Villa Sendero Apartments Development Plan

*PASSED BY
P.C.
1/23/2020*

ISSUE:

JenkinsGavin, agent for TA Las Soleras, LLC requests Development Plan approval of a 252-unit multi-family apartment community on approximately 11.4-acre acres. The property is zoned C-2 (General Commercial) and is located at 5132 Beckner Road.

TRAFFIC:

As part of the Pulte initiated Master Plan Amendment for the Las Soleras Master Plan, City Council conditioned that the developer extend Beckner Road to Richards Avenue. The City has noticed operational issues at the Beckner/Richards intersection since the completion of this extension. The Villa Sendero Traffic Impact Analysis notes that this intersection does not have adequate capacity.

In order to provide better operation at the Beckner/Richards intersection, the Public Works Department recommends that the Villa Sendero Apartment complex construct a temporary signal. The developer will receive impact fee credits for the cost to design and construct this signal.

RECOMMENDED ACTION:

Conditions of Approval:		Must be Completed By
1	The developer shall design a temporary signal at the Beckner Road/Richards Avenue intersection. The design shall be reviewed and approved by the Public Works Department.	Prior to Recordation of Development Plan
2	The developer shall construct a temporary signal at the Beckner Road/Richards Avenue intersection.	Prior to 50% Certificate of Occupancy
3	The developer shall receive impact fee credits for the cost to design and construct a temporary signal at the Beckner Road/Richards Avenue intersection. In order for these improvements to be eligible for impact fee credits, they must be included on the City's Impact Fee Capital Improvement Plan (IFCIP). If the IFICP Advisory Committee and/or the City Council do not recommend placing	

	these improvements on the ICIP, the developer will not be required to construct said improvements

EXECUTIVE SUMMARY

Duncan Associates has been retained by the City of Santa Fe to update the City's capital improvements plans, land use assumptions and impact fees for roads, parks/trails, fire/EMS and police facilities. This study calculates maximum impact fees that Santa Fe can charge based on the existing levels of service.

Report Layout

The report begins with five chapters that have general applicability to all four fee types: legal framework, service areas, land use assumptions, methodologies and land use categories. The last four chapters address the four facility types: roads, parks/trails, fire/EMS and police. Appendices provide more detailed data and analysis to support the individual fee calculations. The final appendix contains the list of planned improvements, which may be amended prior to the next comprehensive impact fee update.

Background

The last comprehensive update of the City's impact fees was based on a 2008 study that was adopted by the City Council on January 9, 2008.¹ The fees were adopted at 60% of the calculated amounts.

Impact fees for residential uses were suspended for two years, effective January 22, 2012. Beginning February 27, 2014, residential impact fees are being collected at 50% of adopted amounts for the next two years.

The current adopted fees are summarized in Table 1 on the following page. The temporary 50% residential fee reduction is not reflected in the table.

In addition to impact fees, the City assesses Utility Expansion Charges (UECs) for water and wastewater. UECs are similar to impact fees, but are adopted under authority provided in state law to assess charges for water and wastewater facilities, rather than under the authority of the *Development Fees Act* that regulates impact fees. The City's UECs are addressed in a separate analysis.

Land Use Categories

It is recommended that the current 20 nonresidential land use categories in the impact fee schedules be reduced to six: retail/commercial, office, industrial, warehouse, mini-warehouse and public/institutional. This approach recognizes that commercial land uses often change, avoids extremely high fees for a small number of land uses (e.g., restaurants, convenience stores, medical offices), eliminates most impact fee charges for change of use, thereby encouraging reuse of existing buildings, and simplifies impact fee administration. This change, however, would result in impact fee revenues about 5% lower than under the more detailed land use categories (see page 16).

¹ Duncan Associates, *Impact Fee Capital Improvements Plan and Land Use Assumptions for Roads, Parks, Fire and Police*, approved by the Santa Fe City Council on January 9, 2008.

Updated Fees

While the updated fees are generally lower than those calculated in the 2008 study, the 2008 fees were adopted at only 60% of the full proportionate-share amounts. Consequently, the updated fees are higher than the current adopted fees for most land uses, as shown in Table 2. Note that a 67% increase from current levels would be necessary to bring the fees up to the levels calculated in 2008 (while it may not be intuitive, if fees are adopted with a 40% reduction, it takes a 67% increase to get back to 100%). Because the updated fees are generally lower than those calculated in 2008, the maximum percentage increases from current adopted fees are generally significantly below 67%.

Table 2. Updated Fees Compared to 2008 Calculated/Adopted Fees

Land Use Type	Unit	Roads	Parks	Fire	Police	Total

Source: Updated fees from Table 24 (roads), Table 36 (parks), Table 47 (fire/EMS) and Table 58 (police); percentage comparison to 2008 fees based on fees calculated in Duncan Associates, *Impact Fee Capital Improvements Plan and Land Use Assumptions for Roads, Parks, Fire and Police*, approved by the Santa Fe City Council on January 9, 2008 and adopted fees from Table 1 (comparison uses shopping center for retail/commercial, general office for office and nursing home for public/institutional).

Adoption of the updated fees at a 70% implementation rate would essentially be revenue-neutral (see Table 4). The updated total impact fees are very similar to current adopted fees for most land uses, as illustrated in Table 3. The Impact Fee Capital Improvements Advisory Committee (CIAC) recommends adoption of the updated fees at this percentage.

Table 3. Updated Fees at 70% Compared to Adopted Fees

Land Use Type	Unit	Roads	Parks	Fire	Police	Total

Source: 70% of updated fees from Table 2; percentage comparison to adopted fees from Table 1 (comparison uses shopping center for retail/commercial, general office for office and nursing home for public/institutional).

Potential Revenue

If the updated fees are adopted at 100% of the proportionate fair-share costs identified in this study, total impact fee revenues over the next seven years would be about \$14 million, assuming no residential fee waivers or reductions, other than for affordable housing. The revenue effects of 100%, 70% and 60% adoption rates are summarized in Table 4, based on the growth projections contained in the updated Land Use Assumptions, and compared to revenue from current fees.

Table 4. Potential Impact Fee Revenue, 2014-2020

Fee Type	Adoption Rates (No Waivers)			Current Fees
	100%	70%	60%	
Roads	\$10,352,347	\$7,246,643	\$6,211,408	\$8,140,027
Parks/Trails	\$2,674,647	\$1,872,253	\$1,604,788	\$2,192,480
Fire/EMS	\$774,244	\$541,971	\$464,546	\$455,399
Police	\$325,566	\$227,896	\$195,340	\$162,915
Total	\$14,126,804	\$9,888,763	\$8,476,082	\$10,950,821

Source: Revenue for updated fees at 100% from Table 26 (roads), Table 38 (parks), Table 49 (fire/EMS) and Table 60 (police); revenue from current fees assumes single-family fee for 2,001-2,500 sq. ft. unit; 95% shopping center rate plus 5% fast-food restaurant rate (fast-food restaurant was actually 9% of retail square footage over the last two years) for retail, general office for office, average of industrial/warehouse for industrial/warehouse and nursing home for institutional.

Recommendations

The consultant offers the following recommendations relating to the impact fee update:

1. **Consolidate/Reduce Number of Nonresidential Land Use Categories.** The City should consolidate the nonresidential land use categories as reflected in the updated fee schedules. Even though this is likely to result in slightly less revenue than would be received if the current detailed categories were retained, such consolidation will recognize that commercial land uses often change, avoid extremely high fees for a small number of land uses, eliminate most impact fee charges for change of use, thereby encouraging reuse of existing buildings, and simplify impact fee administration.
2. **Consider Single-Family Flat Rate.** The City could also consider adopting flat rate for single-family detached units in place of the current differentiated fees by dwelling unit size. Both options have been calculated in this study, and both options would generate about the same amount of revenue. This would result in somewhat higher fees for smaller units and lower fees for larger units. However, the difference between fees for the smallest and largest single-family size categories has gone down from a theoretical maximum of \$3,089 when the differential fees were first calculated in 2003 to only \$1,166 in this update,² due to switch to more reliable regional data. The City may well decide that this relatively small differential is no longer worth the additional complexity.
3. **Adopt Fees at the Same Percentage for All Land Uses.** The updated fees may be adopted at a percentage less than the proportionate fair-share amounts documented in this study. Different adoption percentages could be applied to the different types of fees (e.g., roads or parks), but the percentage for each fee type should be applied uniformly to all land use types in order to retain the proportionality of the fees to the impact of various types of development. Adoption of all fees at 70% would produce about the same revenue as current fees.

² Sum of road, park, fire and police fees, if adopted at 100% with no residential fee waivers.

LEGAL FRAMEWORK

Impact fees are a way for local governments to require new developments to pay a proportionate share of the infrastructure costs they impose on the community. In contrast to traditional “negotiated” developer exactions, impact fees are charges that are assessed on new development using a standard formula based on objective characteristics, such as the number and type of dwelling units constructed. The fees are one-time, up-front charges, with the payment usually made at the time of building permit issuance. Impact fees require each new development project to pay its pro-rata share of the cost of new capital facilities required to serve that development.

Impact fees were pioneered by local governments in the absence of explicit state enabling legislation. Consequently, such fees were originally defended as an exercise of local government's broad “police power” to protect the health, safety and welfare of the community. The courts gradually developed guidelines for constitutionally-valid impact fees, based on a “rational nexus” that must exist between the regulatory fee or exaction and the activity that is being regulated. To date, 28 states have adopted impact fee enabling legislation. These acts have tended to embody the constitutional standards that have been developed by the courts. Impact fees in New Mexico are governed by the New Mexico *Development Fees Act* (Sec. 5-8-1, et. seq., New Mexico Revised Statutes).

Service Area

The New Mexico *Development Fees Act* requires that Land Use Assumptions and Capital Improvements Plans must be prepared for each “service area.” A service area is a geographic area within which a set of capital facilities provides roughly equivalent benefit to all development located within the area. In general, impact fees collected within a service area will be spent within the same service area, although there may be instances where the facility that serves development in the service area is actually physically located outside the service area.

Land Use Assumptions

An impact fee update must include land use assumptions (growth projections) for each service area. The *Development Fees Act* defines land use assumptions as “projections of changes in land uses, densities, intensities and population in the service area over at least a five-year period.” Because the Capital Improvements Plan that must be prepared for each service area must identify improvement needs for a period not to exceed ten years, a 5-to-10-year time-frame is appropriate for an impact fee study. A seven-year time frame is used for the land use assumptions and capital improvements plans in this study. The land use assumptions are provided in Appendix F.

Capital Improvements Plan

According to the *Development Fees Act*, impact fees can only be spent on improvements identified in the Capital Improvements Plan. The Capital Improvements Plan required by the *Development Fees Act* is somewhat different from the traditional capital improvements program. Like a traditional capital improvements program, the Capital Improvements Plan required by the *Development Fees Act* must include a list of capital projects, their costs and anticipated sources of funding. However, the similarity stops there. Elements required in the Capital Improvements Plan but not found in a typical capital improvements program include an inventory of existing facilities, including an analysis of current usage and capacity of such facilities; a determination of the portion of the cost of planned improvements, as well as existing improvements with remaining excess capacity, that is attributable to growth; an equivalency table that estimates the service demand generated by different

land use types; and the projected growth in service demand based on the recommended Land Use Assumptions over a period not to exceed ten years. In essence, the impact fee Capital Improvements Plan is the impact fee study.

Capital Facilities Plans

While the Capital Improvements Plan includes much more than a list of planned projects, the project list has special relevance. Impact fees can only be spent on projects that are listed in the adopted Capital Improvements Plan. In addition, credits against the impact fees in return for dedications of land or improvements made by developers are only allowed if the dedication or improvement is listed in the Capital Improvements Plan. In order to distinguish between the full Capital Improvements Plan and the list of projects, the list of projects will be referred to as the Capital Facilities Plan. The Capital Facility Plans for each of the four fee types are provided in Appendix G.

Level of Service

The Act requires “an analysis of the total capacity [and] the level of current usage” of existing facilities, a relationship that is often referred to as “level of service” (although this term does not appear in the Act). The impact fee principle that is being referred to here is that new development should not be charged for a higher level of service than is being provided to existing development. If facilities are currently deficient with respect to the capacity standard that is being used to calculate the impact fees, a credit should be provided to new development to acknowledge tax or rate payments that will be made by new development and used to remedy the deficiency. In general, the necessity of providing a deficiency credit is avoided by basing the impact fees on the current level of service.

Service Unit

Both demand and capacity need to be expressed in terms of the same “service units” – defined by the Act as “a standardized measure of consumption, use, generation or discharge.” The service unit for parks, for example, might be acres of park land. In order to translate land use projections into additional demands for service, the Capital Improvements Plan must include “an equivalency or conversion table establishing the ratio of a service unit to various types of land uses, including residential, commercial, and industrial.” Such a table, which relates various land use categories and the service demands associated with them, is the basis for the fee schedule. The equivalency table for road impact fees, for example, would specify the typical travel demand generated by a single-family unit, 1,000 square feet of office space, etc.

Fee Schedule

The fee schedule brings together all of the fee calculation components. These include the land use categories, service demands associated with a unit of development, cost per service unit and revenue credits. Although the Act does not specifically mention credits for other revenue contributions (e.g., gross receipts taxes used to pay debt service on the same facility), established case law clearly indicates that double-charging must be avoided and that such contributions must be credited in the impact fee formulation.

Updates

The *Development Fees Act* requires that the land use assumptions and capital improvements plan be updated within five years from the date that the last capital improvements plan was adopted.

SERVICE AREAS

The New Mexico *Development Fees Act* defines “service area” as

the area within the corporate boundaries or extraterritorial jurisdiction of a municipality or the boundaries of a county to be served by the capital improvements or facility expansions specified in the capital improvements plan designated on the basis of sound planning and engineering standards.

The service area for the City’s current impact fees is the Santa Fe Urban Area (see Figure 1). The Urban Area is the geographic area that includes the City’s incorporated area as well as some additional unincorporated area that is likely to be annexed into the city at some time in the future. In the future, comparisons between the “city” and “urban area” may be unnecessary as the city annexes most of the urban area. However, the Agua Fria Traditional Historic Community, containing 2,800 residents and 1,134 housing units according to the 2010 Census, is located within the urban area and is expected to remain unincorporated. City impact fees are charged only within the corporate limits and unincorporated areas within the Urban Area where the City has building permit authority.

The City currently has a single service area for all of the fees. In general, multiple service areas should be avoided where possible. Each service area requires the preparation of separate land use assumptions, facility inventories, impact fee calculations and capital improvements plans. In addition, multiple service areas limit the City’s ability to accumulate sufficient funds to make improvements.

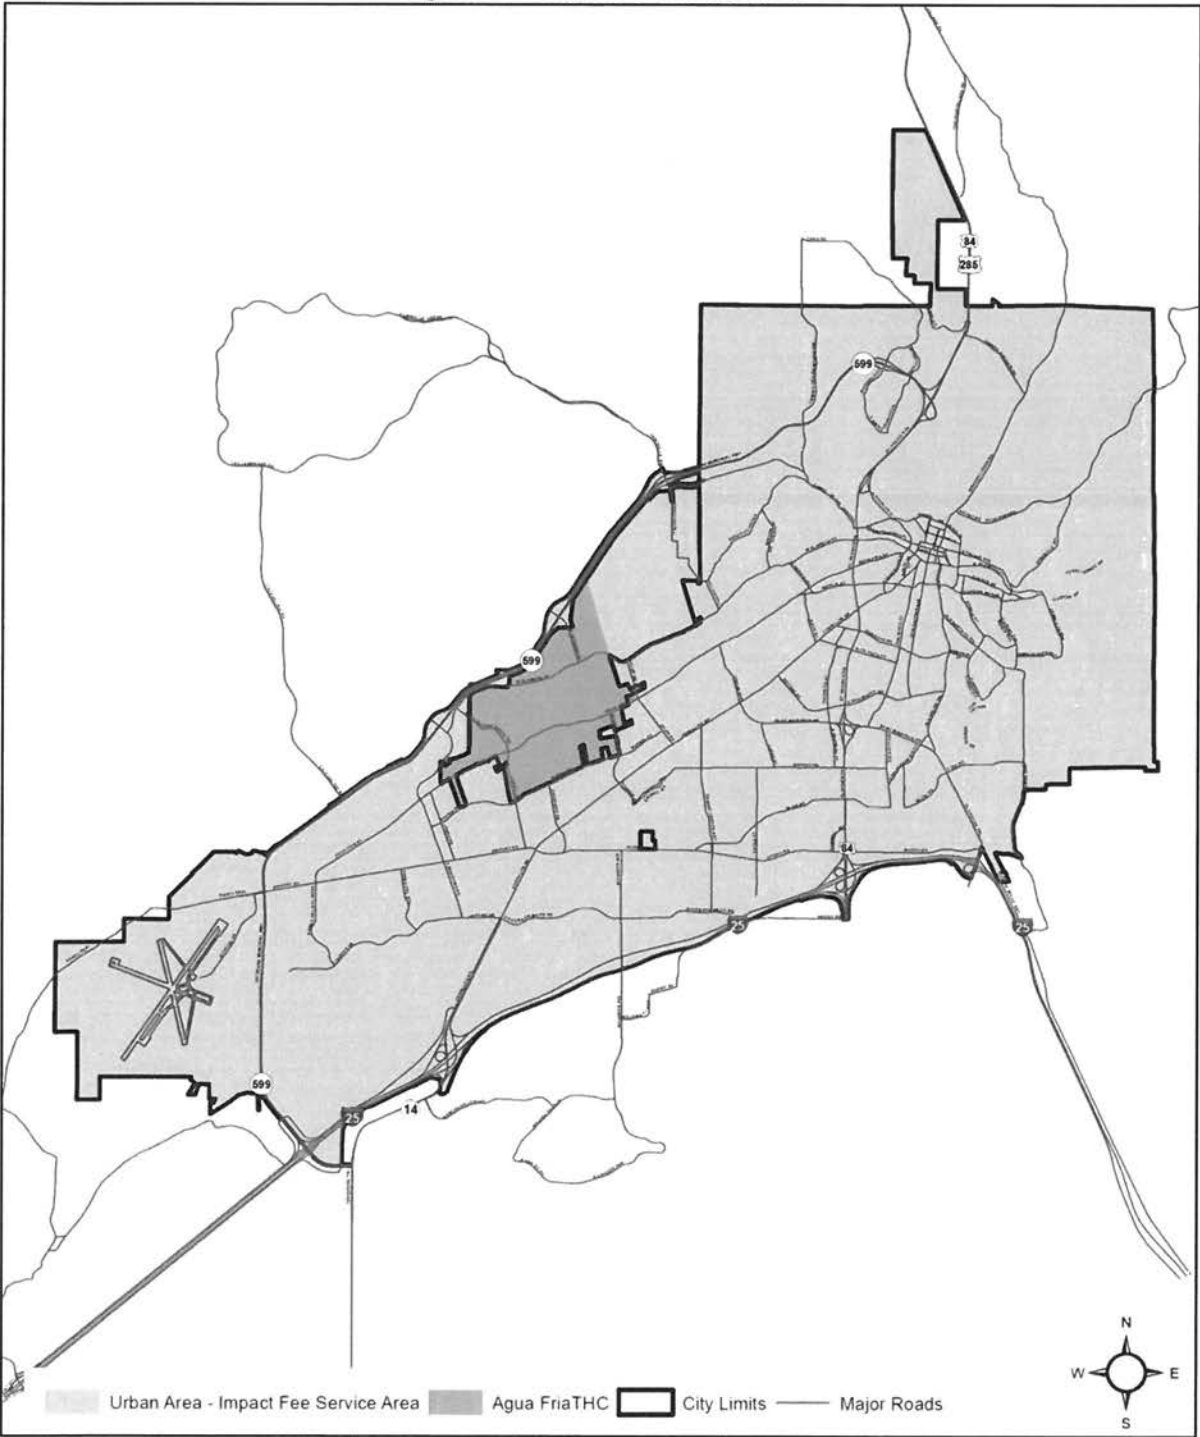

Multiple service areas are sometimes used to create fee differentials as an incentive to steer development to desired locations. Impact fee differentials by area, however, are unlikely to be large enough to have any significant effect on the location of development.

Benefit District Option. While multiple service areas are to be avoided, the City could consider the division of the service area (for one or more impact fee types) into two or more “benefit districts.” Benefit districts are not described in the State’s impact fee enabling act, but they are used in many impact fee systems around the country. A benefit district is simply a requirement that impact fees collected in a defined area be spent in the same area. Benefit districts use a requirement of geographic proximity to help ensure that the fees are spent on improvements that benefit the developments generating the fees.

Multiple benefit districts put the same restrictions on the expenditure of funds as multiple service areas would, but the preparation of separate land use assumptions, capital improvements plans and impact fee calculations for each benefit district is not required. Multiple benefit districts generally make the most sense for road and park impact fees. Fire and police facilities tend to be either more centralized (police) or more integrated (fire), and are generally not appropriate for multiple benefit districts.

The City has been experiencing significant growth in its recently-annexed southwest portion of the Urban Area, and some interest has been expressed in implementing two benefit districts (southwest/non-southwest) for road and park/trail impact fees.

Figure 1. Santa Fe Urban Area

Roads

The City's road impact fees fund improvements to the major roadway system, defined as arterial and collector roadways, excluding I-25 and NM 599. Because the major roadway system facilitates travel throughout the community, a single service area continues to be appropriate for road impact fees.

Parks/Trails

The City's park/trail impact fees fund improvements to the system of recreational facilities, including regional parks, neighborhood parks and trails. Regional parks and trails tend to serve relatively large areas, while neighborhood parks have more localized benefit. As long as the City makes a good faith effort to use park/trail impact fees to fund neighborhood park improvements in areas that are experiencing residential development, a single service area will continue to be appropriate for park/trail impact fees.

Fire and Police

A single service area continues to be appropriate for fire and police facilities. Police facilities tend to be centralized, and police protection is provided throughout the city from roving patrol cars. While fire facilities are by necessity more decentralized, responding units are not always located at the nearest station, and units respond to major incidents from all over the city. The City's fire and police facilities and equipment thus form integrated systems, and single service areas are appropriate.

LAND USE ASSUMPTIONS

Land Use Assumptions for the impact fees are provided in Appendix F. The land use assumption report provides growth projections for the Santa Fe Urban Area, a unified service area within which the city may expend impact fee monies for eligible capital improvement projects. The New Mexico Development Fees Act (§§ 5-8-1 through 5-8-43, NMSA 1978), specifies that land use assumptions must be adopted for a period of at least five years. The land use assumptions cover a period of seven calendar years from the beginning of 2014 through the end of 2020. Over this period, the land use assumptions anticipate that the service area will gain 2,100 new dwelling units with approximately 3,500 new residents and approximately 1.23 million square feet of new nonresidential development. The growth projections for housing, population and nonresidential floor area from 2014 through 2020 are summarized in Table 5.

Table 5. Land Use Assumptions Summary, 2014-2020

	2014	2020	Increase
Populaton	86,500	90,000	3,500
Single-Family Detached*	25,075	26,563	1,488
Multi-Family**	14,125	14,737	612
Moble Home	5,200	5,200	0
Total Housing Units	44,400	46,500	2,100
Retail (1,000 sf)	10,198	10,898	700
Office (1,000 sf)	8,972	9,322	350
Industrial (1,000 sf)	4,360	4,465	105
Institutional (1,000 sf)	2,960	3,030	70

METHODOLOGIES

This section reviews the existing methodologies for all four facility types, identifies potential alternatives and makes recommendations for changes.

There are a variety of methodologies that can be employed to calculate impact fees. Any methodology, however, must comply with the fundamental principle of impact fees, which is that new development should not be charged for a higher level of service than existing development. Impact fees can be based on a higher level of service than currently exists, but if they are based on a higher level of service a funding plan must be put in place to remedy the existing deficiencies and a credit must be provided for the portion of the funding used to remedy the deficiencies that will be generated by new development.

Alternative Methodologies

There are two basic types of impact fee methodologies: “standards-based” and “plan-based.” Standards-based methodologies use a generalized, system-wide level of service measure, such as the number of park acres per 1,000 residents. With such a standard, appropriate impact fees can be calculated based on the cost of maintaining the existing level of service without a master plan specifying specific improvements to be constructed. This approach gives the City flexibility to modify its Capital Improvements Plan to respond to changing conditions without triggering the need for an impact fee update.

A plan-based methodology relies on a list of planned capital improvements, and is basically calculated by dividing the cost of needed improvements over a period of time by the anticipated new service units over the same time period. The essential requirement for a plan-based fee is that it must demonstrate the nexus between the cost of the planned improvements and the amount of anticipated development. Some plan-based fees use a master plan to establish this nexus. The master plan approach is generally based on an improvement-specific or geographically-based level of service standard, such as “all major roadways shall operate at LOS D or better,” and often results in the identification of existing deficiencies. Other plan-based fees are based on a build-out plan or list of capital improvements that are not based on a master plan. These non-master plan approaches must generally be combined with a standards-based analysis that demonstrates that the plan-based fee does not exceed the existing level of service, in order to establish the nexus between the planned improvements and the amount of development to be served by those improvements.

Current Methodologies

The City’s current impact fees are all based on a standards-based methodology, as described below. No changes from the basic methodologies are proposed.

Roads

The standards-based methodology for road impact fees is generally referred to as a “consumption-based” approach. In the standard consumption-based approach, the total cost of a representative set of improvements is divided by the capacity added by those improvements in order to determine an average cost per vehicle-mile of capacity (VMC). This cost per VMC is then multiplied by the

vehicle-miles of travel (VMT) generated by a unit of development of a particular land use type to determine the gross impact fee (i.e., before credits). A variant is the modified consumption-based approach, which uses a system-wide VMC/VMT ratio higher than the 1:1 ratio implicit in the standard approach.

The City's current road impact fees are based on the standard consumption-based methodology. This is a relatively conservative approach, because most roadway systems require a VMC/VMT ratio greater than one to operate effectively, due to the fact that vehicular travel does not always go where excess road capacity is located. Nevertheless, it is a widely-used, reliable approach to the calculation of road impact fees.

Parks

The standards-based methodology is sometimes referred to as "incremental expansion," because it uses the existing level of service to determine the cost required to serve future development. It is based on the reasonable assumption that facilities will need to be expanded proportional to the amount of growth that occurs. This approach is appropriate for facilities that do not have a significant amount of excess capacity to serve future development.

Park impact fees are typically only assessed on residential development, because the need for parks is related to the number of people residing in the community. Some park impact fees use the ratio of park acres to population as the level-of-service measure. However, rather than using population as the service unit for parks, the current fees use Equivalent Dwelling Units (EDUs). A typical single-family home is 1.00 EDU, while the EDUs for other housing types are based on the average household size relative to a typical single-family unit. Using EDUs rather than population has the advantage of taking volatile occupancy rates out of the equation.

While a ratio of acres to population may be a useful level-of-service measure for park planning purposes, it is less appropriate as the basis for impact fee calculation. An acre developed with ball fields represents a much lower capital investment than an acre developed with a community center or a swimming pool. The current park methodology uses the inventory of actual improvements and current replacement costs to quantify the capital investment in existing facilities. The existing LOS is defined in terms of capital investment per EDU.

Fire and Police

The current fire and police impact fees are also based on the incremental expansion approach, based on the existing city-wide level of service. The level of service is quantified in terms of the capital investment per service unit. The service unit for fire and police fees is "functional population." A functional person is similar to the concept of a full-time equivalent worker, and represents the equivalent of a person being present at the land use for 24 hours a day. The functional population approach is appropriate for fire and police services, since the demand for such services is strongly related to the number of people present at a land use.

LAND USE CATEGORIES

This section contains the consultant's recommendations relating to the land use categories to be included in the updated impact fee schedule.

Single-Family Fees by Unit Size

The analysis provided in Appendix B indicates that average household size does not increase for single-family detached units over about 3,000 square feet. Consequently, this update recommends collapsing the 3,001-3,500 square feet, 3,501-4,000 square feet, and over 4,000 square foot categories. Alternatively, the City Council could choose to charge single-family fees based on the average fee per dwelling unit.

Nonresidential Land Use Categories

The consultant recommends reducing the number of nonresidential land use categories in the impact fee schedule. In hindsight, the categories we initially prepared for the City in 2003, and updated in 2008, are probably too detailed. In recent years, we have been encouraging clients to simplify their impact fee systems, including reducing the land uses in their fee schedules to fewer, more general, categories. Fewer, broader land use categories are just as defensible from a legal standpoint and offer several advantages, including avoiding extremely high fees for a small number of land uses (e.g., restaurants, convenience stores, medical offices), eliminating most impact fee charges for change of use, thereby encouraging reuse of existing buildings, and simplifying impact fee administration. We most recently applied this approach in our 2012 update of Albuquerque's impact fees.³

The major suggested change is to simplify and reduce the number of nonresidential land use categories included in the impact fee schedule. Including many land use categories seems on the face of it to be more accurate and to make it easier to classify proposed uses. After all, if a use is specifically listed, that should make it easier to assess fees when that particular use is proposed. The problem is that it is impossible to list all potential uses, and including many land use categories does not necessarily improve accuracy. For example, while the Institute of Transportation Engineers (ITE) *Trip Generation* manual provides trip rates for many categories, the land uses are often not well defined, many of the rates are based on very small samples, and data on pass-by rates and average trip lengths for most of those uses are not readily available. In addition, short-term accuracy can end up overcharging for long-term impacts, because commercial uses change frequently and impact fees are not refunded when a use is changed to one that generates less impact.

The alternative approach of listing fewer, broader categories in the fee schedule is becoming increasingly popular as a way to encourage the reuse of existing buildings and simplify impact fee administration. Such fee schedules list a few very general nonresidential categories, such as retail/commercial, office, public/institutional, industrial, warehouse and mini-warehouse. This approach may not generate as much revenue as the more detailed approach, but it is legally

³ Duncan Associates, *Impact Fee Land Use Assumptions and Capital Improvements Plan, 2012-2022, prepared for the City of Albuquerque, New Mexico*, September 2012 (<https://www.cabq.gov/council/documents/OC127.pdf>).

defensible, reasonable and simpler to administer. It recognizes that the use of buildings often changes over time, and it focuses on average long-term impacts. Short-term impacts in the immediate vicinity of a use are a legitimate focus for traffic impact analyses designed to determine impacts on nearby intersections, but are not necessarily the most appropriate for road impact fees. Most commercial uses tend to be located in shopping centers, and the ITE trip generation rates for shopping centers are based on a broad mix of land uses. Shopping centers often include high-traffic uses such as movie theaters, banks, medical offices and restaurants, and the ITE manual notes that some of the studies of shopping centers include trips generated from outparcels, which tend to be occupied by the highest-traffic uses, such as convenience stores, gas stations and fast food restaurants. This approach recognizes that commercial land uses often change, avoids extremely high fees for a small number of land uses (e.g., restaurants, convenience stores), eliminates most impact fee charges for change of use, thereby encouraging reuse of existing buildings, and simplifies impact fee administration.

The proposed land use categories are compared to the current categories in Figure 2. In addition, this update calculates an average impact fee for single-family detached units, which would allow the City to update the current single-family fees by size category or use a single, average fee.

Figure 2. Current and Proposed Land Use Categories

Proposed Land Use Categories	Current Land Use Categories	
Single Family Detached	Single Family Detached	
Up to 1,500 sq. ft.	Up to 1,500 sq. ft.	
1,501 - 2,000 sq. ft.	1,501 - 2,000 sq. ft.	
2,001 - 2,500 sq. ft.	2,001 - 2,500 sq. ft.	
2,501 - 3,000 sq. ft.	2,501 - 3,000 sq. ft.	
More than 3,000 sq. ft.	3,001 - 3,500 sq. ft.	3,501 - 4,000 sq. ft.
Guest Unit, 750 sf or less	Guest Unit, 500 sf or less	Guest Unit, 501-750 sf
Multi-Family/Guest Unit >750 sf	Multi-Family/Other	Guest Unit, > 750 sf
Retail/Commercial	Shopping Center/Gen. Retail	Hotel/Motel
	Auto Sales/Service	Movie Theater
	Bank	Restaurant, Packaged Food
	Conv. Store w/Gas Sales	Restaurant, Sit-Down
	Health Club	Restaurant, Fast Food

Public/Institutional	Nursing Home	Day Care Center
	Church	Educational Facility/Dorm
Industrial	Industrial	
Warehouse	Warehouse	
Mini-Warehouse	Mini-Warehouse	

To estimate the potential revenue loss from moving to the more generalized nonresidential categories, permit data were reviewed for the last two years. Table 6 below shows the difference between the impact fees that would have been collected under the current adopted fee schedule (with no reduction or waiver of residential fees) versus under the proposed more general land use categories. Industrial and warehouse categories are not shown, because the City did not permit any developments of these types over the last two years. This comparison suggests that the more general land use categories would result in total impact fee revenue about 5% lower than under the more detailed categories.

Table 6. Impact Fee Revenue, Detailed vs. General Nonresidential Categories

Land Use Categories	Unit	No. of Units Permitted	Impact Fee Revenue				
			Roads	Parks	Fire	Police	Total
Residential (all)	Dwelling	455	\$836,527	\$505,610	\$56,983	\$20,143	\$1,419,263
Shopping Center/Gen. Retail	1,000 sq. ft.	89.319	\$410,599	\$0	\$19,740	\$6,967	\$437,306
Auto Sales	1,000 sq. ft.	8.852	\$19,297	\$0	\$1,956	\$690	\$21,943
Bank	1,000 sq. ft.	6.267	\$31,009	\$0	\$1,385	\$489	\$32,883
Restaurant, Sit-Down	1,000 sq. ft.	22.321	\$113,458	\$0	\$4,933	\$1,741	\$120,132
Restaurant, Fast Food	1,000 sq. ft.	13.096	\$144,894	\$0	\$2,894	\$1,021	\$148,809
Health Club	1,000 sq. ft.	2.740	\$12,040	\$0	\$606	\$214	\$12,860
Office, General	1,000 sq. ft.	31.501	\$76,516	\$0	\$3,906	\$1,386	\$81,808
Office, Medical	1,000 sq. ft.	3.328	\$12,989	\$0	\$413	\$146	\$13,548
Nursing Home	1,000 sq. ft.	17.068	\$23,110	\$0	\$2,116	\$751	\$25,977
Church	1,000 sq. ft.	32.897	\$50,036	\$0	\$4,079	\$1,447	\$55,562
Mini-Warehouse	1,000 sq. ft.	3.106	\$1,295	\$0	\$146	\$50	\$1,491

Mini-Warehouse	1,000 sq. ft.	3.106	\$1,295	\$0	\$146	\$50	\$1,491
Total, General Categories			\$1,607,210	\$505,610	\$99,157	\$35,045	\$2,247,022
Percentage Revenue Change			-7.2%	0.0%	0.0%	0.0%	-5.3%

Note: Approximate two-year revenue, based on 22 months of residential permits (1/23/12-11/23/13) and nonresidential permits for 2012-2013 calendar years

Source: Residential permits and revenue from Table 7; nonresidential permits for calendar years 2012 and 2013 from City of Santa Fe Long Range Planning Division, February 21, 2014; impact fee revenue based on current fees for detailed land use categories from Table 1 and general categories based on shopping center for retail, general office for office, and education for public/institutional.

Most of the reduced revenue is attributable to fast food restaurants, which would pay significantly less under the more generalized retail/commercial category. However, this may be a function of the fact that the City experienced a lot of fast food restaurant development over the last two years, but not any development in some other high-fee categories, such as convenience store/gas sales and movie theaters. While the distribution of land use types developed may change, the percentage shown in the above table is a reasonable estimate of the relative amounts of revenue likely to be received under the detailed versus general nonresidential land use categories.

While only modest changes are proposed to the residential categories, the City also has the option of charging a flat rate for single-family detached, rather than the tiered rates by dwelling size. The 2008 study did not calculate an average single-family fee, but the current fee for the 1,501-2,000 square feet category is a reasonable approximation (the City has been issuing an equal number of permits for smaller and larger units). Accessory units are treated as multi-family in the general categories, because fees for accessory units were not calculated in the 2008 study. The analysis suggests that collapsing the residential categories would have very little revenue impact, as shown in Table 7 below.

Table 7. Impact Fee Revenue, Detailed vs. General Residential Categories

Land Use Categories	Unit	No. of Units Permitted	Impact Fee Revenue				
			Roads	Parks	Fire	Police	Total
Single Family Detached							
(0 to 1,500 sq. ft.)	Dwelling	75	\$138,750	\$83,325	\$9,375	\$3,300	\$234,750

ROADS

The New Mexico Development Fees Act authorizes local governments to impose impact fees for “roadway facilities,” including traffic signals. In the 2008 update, the arterial impact fee was expanded to include collector roads and was combined with the traffic signal impact fee into comprehensive road impact fee.

Service Area

Road impact fees will be calculated in this section for the City’s Urban Area, which includes the incorporated area of the City of Santa Fe and unincorporated areas around the city that will likely be provided with City service and may ultimately be annexed by the City. The road impact fees will be collected by the City only within the city limits and unincorporated areas within the Urban Area where the City has building permit authority, and will be limited to being spent within the Urban Area.

Service Unit

In impact fee analysis, capital costs, revenue credits and net costs are calculated on the basis of a “service unit,” which is a common unit of measurement of facility demand and capacity. An appropriate service unit for roadway capital cost analysis is vehicle-miles of travel (VMT). Vehicle-miles is a combination of the number of vehicles traveling during a given time period and the distance (in miles) that these vehicles travel. The two time periods most often used in traffic analysis are the 24-hour day (average daily trips or ADT) and the single hour of the day with the highest traffic volume (peak hour trips or PHT). Since available traffic counts are in the form of daily volumes, the impact fees will continue to be based on ADT.

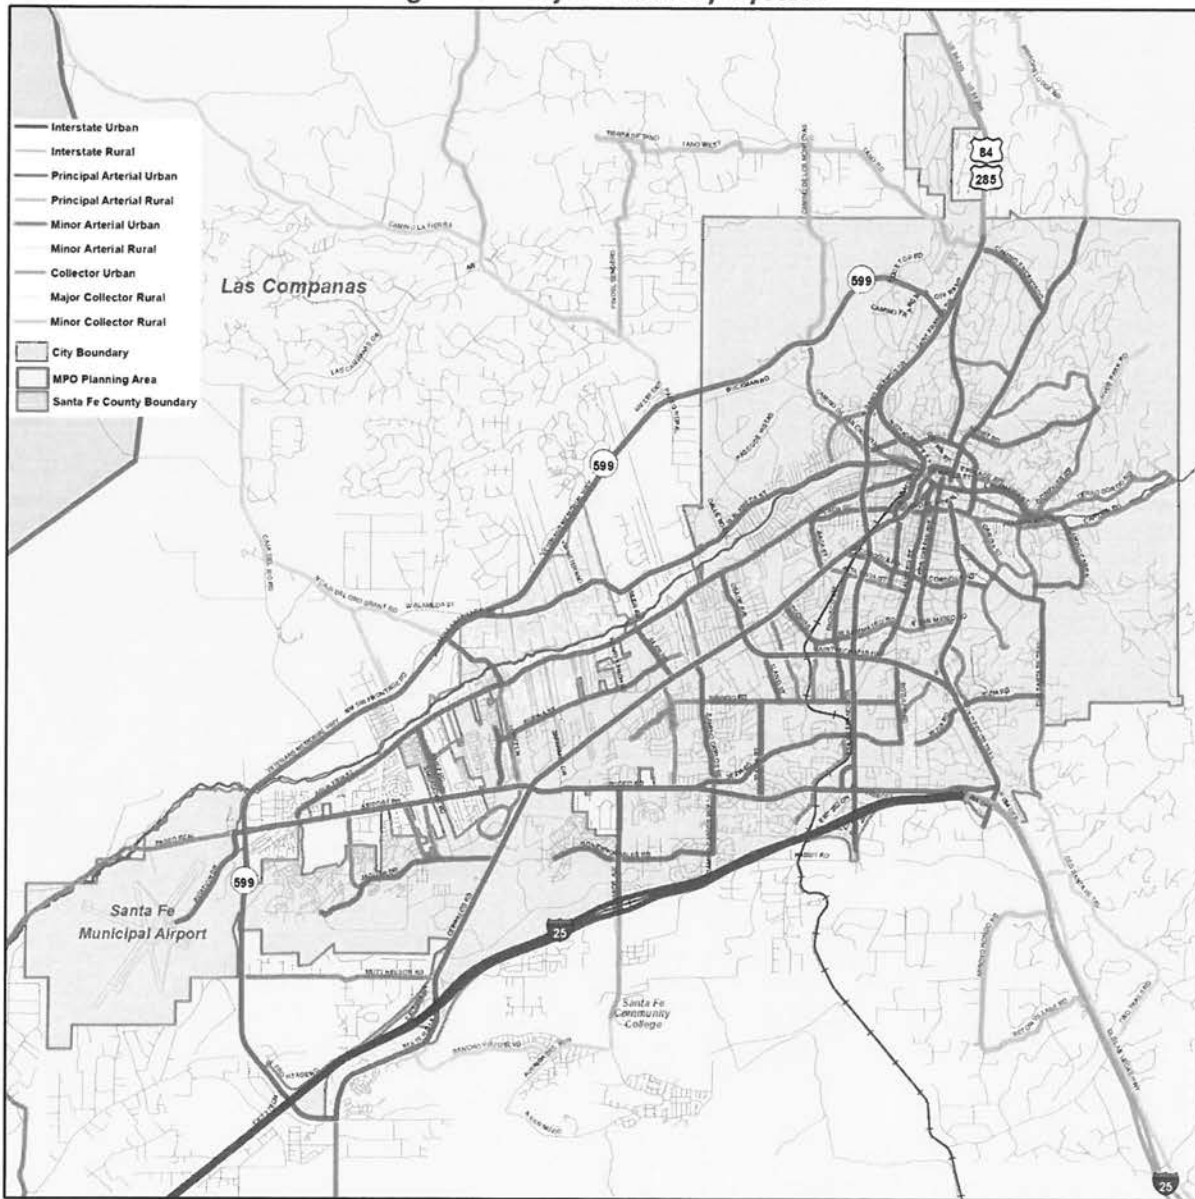

Major Road System

The New Mexico Development Fees Act limits the use of transportation impact fees to “roadway facilities,” which are defined as:

...arterial or collector streets or roads that have been designated on an officially adopted roadway plan of the municipality or county, including bridges, bike and pedestrian trails, bus bays, rights of way, traffic signals, landscaping and any local components of state or federal highways.

The City’s road impact fee ordinance defines the major road system as all collector and arterial roads. The major road system excludes I-25, because this facility serves long-distance travel and it is unlikely that the City will make any contributions toward expanding its capacity. In this update, NM 599 is also excluded, because it is a State-maintained expressway that is on the border of its incorporated boundary. The City’s major roadway system is illustrated in Figure 3. Traffic signals and intersection improvements that are associated with the major road system can be funded with the road impact fee.

Figure 3. Major Roadway System

An inventory of the major roadway system was prepared as part of this update and presented in Table 61 in Appendix A. The major purpose of the inventory is to determine the total amount of travel on the major road system, expressed in vehicle-miles of travel (VMT), and system-wide capacity, expressed as vehicle-miles of capacity (VMC). The system-wide VMT is used to calibrate national travel demand factors to local conditions.

Road impact fees will only be allowed to be spent to make improvements to the major road system. By the same token, no credit should be given unless the developer is required to improve the major road system being funded by the fee.

Methodology

As with the previous road impact fee calculation, the methodology for determining the road segment component of the road impact fee is based on a “consumption-based” model, which basically charges a new development the cost of replacing the capacity that it consumes on the major road system. That is, for every vehicle-mile of travel (VMT) generated by the development, the road impact fee charges the net cost to construct an additional vehicle-mile of capacity (VMC).

Since travel is never evenly distributed throughout a road system, actual road systems require more than one unit of capacity for every unit of demand in order for the system to function at an acceptable level of service. Suppose, for example, that the City completes a major arterial widening project. The completed arterial is likely to have a significant amount of excess capacity for some period of time. If the entire system has just enough capacity to accommodate all of the vehicle-miles of travel, then the excess capacity on this segment must be balanced by another segment being over-capacity. Clearly, road systems in the real world need more total aggregate capacity than the total aggregate demand, because the traffic does not always precisely match the available capacity. Consequently, the standard consumption-based model generally underestimates the full cost of accommodating new development at the existing level of service.

In most rapidly growing communities, some roads will be experiencing an unacceptable level of congestion at any given point in time. One of the principles of impact fees is that new development should not be charged for a higher level of service than is provided to existing development. In the context of road impact fees, this has sometimes been interpreted to mean that impact fees should not be spent on roads that are already over-capacity. However, it is not necessary to address existing deficiencies in a consumption-based system, which, unlike an improvements-driven system, is not designed to recover the full costs to maintain the desired LOS on all road segments. Instead, it is only designed to maintain a minimum one-to-one overall ratio between system demand and system capacity. Virtually all major road systems have more capacity (VMC) than demand (VMT) on a system-wide basis. Consequently, under a consumption-based system, the level of service standard is really a system-wide VMC/VMT ratio of one.

The existing system-wide VMC/VMT ratio is considerably higher than one, as shown in Table 8. Because the City’s major road system currently operates at better than a one-to-one ratio, there are no existing deficiencies on a system-wide basis.

Table 8. System-Wide Ratio of Road Capacity to Demand

Daily Vehicle-Miles of Capacity (VMC)	2,813,450
÷ Daily Vehicle-Miles of Travel (VMT)	1,324,631
System-Wide Capacity/Demand Ratio	2.12

Source: Table 61 in Appendix A.

The road impact fee formula is presented in Figure 4.

Figure 4. Road Impact Fee Formula

FEE	=	VMT X NET COST/VMT
Where:		
VMT	=	TRIPS x % NEW x LENGTH x ADJUST
TRIPS	=	1/2 average daily trip ends during weekday
% NEW	=	Percent of trips that are primary trips
LENGTH	=	Average length of a trip
ADJUST	=	Local travel demand adjustment factor
NET COST/VMT	=	COST/VMT - CREDIT/VMT
COST/VMT	=	COST/VMC X VMC/VMT
COST/VMC	=	Average cost per new VMC
VMC/VMT	=	Ratio of vehicle-miles of capacity to vehicle-miles of travel
CREDIT/VMT	=	Credit per VMT based on revenues generated

The traffic signal portion of the road impact fee is based on the ratio of existing traffic demand to existing signals. The current traffic signal level of service is shown in Table 9.

Table 9. Traffic Signal Level Of Service

Existing Vehicle-Miles of Travel (VMT)	1,324,631
÷ Existing Traffic Signals	119
Existing VMT per Signal	11,131

Source: Existing Urban Area VMT from Table 8; existing signals from City of Santa Fe Long Range Planning Division, October 25, 2013.

Travel Demand

The travel demand generated by specific land use types is a product of three factors: 1) trip generation, 2) percent new trips and 3) trip length. The first two factors are well documented in the professional literature, and the average trip generation characteristics identified in studies of communities around the nation should be reasonably representative of trip generation characteristics in Santa Fe. In contrast, trip lengths are much more likely to vary between communities, depending on the geographic size and shape of the community and its major street system.

Trip Generation

Trip generation rates are based on information published in the most recent edition of the Institute of Transportation Engineers' (ITE) Trip Generation manual. Trip generation rates represent trip ends, or driveway crossings at the site of a land use. Thus, a single one-way trip from home to work counts as one trip end for the residence and one trip end for the work place, for a total of two trip ends. To avoid over-counting, all trip rates have been divided by two. This places the burden of travel equally between the origin and destination of the trip and eliminates double-charging for any particular trip.

As with the current impact fee schedule, the road impact fees calculated in this report will vary by the size of the dwelling unit for single-family detached units. The average household size of single-family detached units by unit size is available from the 2008-2012 American Community Survey

conducted by the U.S. Census Bureau for Santa Fe. This information is combined with the trip rate data by household size provided by the National Cooperative Highway Research Program to derive daily trip generation rates, as shown in Table 10.

Table 10. Single-Family Trip Generation Rates

Single-Family Unit Size (Heated Living Area)	Average HH Size	Daily Trips
1,500 sq. ft. or less	1.95	8.56
1,501-2,000 sq. ft.	2.04	9.33
2,001-2,500 sq. ft.	2.23	9.68
2,501-3,000 sq. ft.	2.35	10.15
3,001 sq. ft. or more	2.50	10.74
All Single-Family Detached Units	2.19	9.52
Guest Unit, 750 sq. ft. or less	1.66	5.80

Source: Average household sizes from Table 65; daily trips derived from Transportation Research Board, NCHRP Report 365, "Travel Estimation Techniques for Urban Planning," Washington, D.C.: National Academy Press, Table 9 (for urban areas with populations of 50,000 to 199,999), 1998.

New Trip Factor

Trip rates also need to be adjusted by a "new trip factor" to exclude pass-by and diverted-link trips. This adjustment avoids over-counting by only including primary trips generated by the development. Pass-by trips are those trips that are already on a particular route for a different purpose and simply stop at a particular development on that route. For example, a stop at a convenience store on the way home from the office is a pass-by trip for the convenience store. A pass-by trip does not create an additional burden on the street system and therefore should not be counted in the assessment of impact fees. A diverted-link trip is similar to a pass-by trip, but a diversion is made from the regular route to make an interim stop. The reduction for pass-by and diverted-link trips was drawn from ITE and other published information.

Average Trip Length

In the context of a road impact fee based on a consumption-based methodology, it is important to determine the average length of a trip on the local major road system. The point of departure in developing local trip lengths is to utilize national data. The U.S. Department of Transportation's 2009 National Household Travel Survey identifies average trip lengths for specific land uses and trip purposes. However, these trip lengths are unlikely to be representative of travel on the major road system utilized in this study for Santa Fe, since the major road system does not include local roads or the interstate highway system. An adjustment factor for local trip lengths can be derived by dividing the VMT that is actually observed on the major road system by the VMT that would be expected using national average trip lengths and trip generation rates.

The first step in developing the adjustment factor for local travel demand is to estimate the total daily vehicle-miles of travel (VMT) that would be expected on Santa Fe's major road system based on national travel demand characteristics. Existing land use data from the Land Use Assumptions are multiplied by average daily trip generation rates, percent of primary trips and national average trip lengths and summed to estimate total city-wide VMT. As shown in Table 11, existing service area land uses, using national trip generation and trip length data, would be expected to generate approximately 2.9 million VMT every day.

Table 11. Expected Vehicle-Miles of Travel

Land Use Type	Unit	Existing Units	Trip Rate	New Trips	Trip Length	Expected VMT
Single-Family Detached	Dwelling	25,075	9.52	100%	9.75	1,163,731
Multi-Family	Dwelling	14,125	6.65	100%	8.62	404,844
Mobile Home/RV Park	Space	5,200	4.99	100%	6.03	78,233
Retail/Commercial	1,000 sf	10,198	42.70	42%	6.27	573,363
Office	1,000 sf	8,972	11.03	100%	9.61	475,508
Industrial/Warehouse*	1,000 sf	4,360	5.20	100%	11.98	135,805
Public/Institutional	1,000 sf	2,960	7.60	100%	8.47	95,271
Total Expected VMT						2,926,755

* Trip rate is average of industrial and warehouse from Table 14

Source: Existing units from Table 5; trip rates and percent new trips from Table 14; national average trip lengths from Table 13.

The next step in developing the local trip length adjustment factor is to determine actual service area VMT on the City of Santa Fe's major road system. Road segment lengths and recent traffic counts from Table 61 in Appendix A are used to determine actual daily VMT.

Annualized average daily traffic (AADT) volumes were obtained from the Santa Fe Metropolitan Planning Organization. Traffic volumes from 2008 and 2011 were available, with the most recent segment volume utilized in the analysis of system-wide volume. Lack of traffic counts for some road segments required use of estimated volumes; arterial road volume estimates were based on 75 percent of the volume for roads with counts, while collector road volume estimates were based on 50 percent of the volume for roads with counts. Where this occurred, it has been noted in the road inventory in Table 61 in Appendix A.

An adjustment of total VMT is sometimes necessary to take into account trips that travel on the major road system without an origin or destination in the urban area. However, since this study excludes I-25 and NM 599, which carry the vast majority of through trips, an adjustment is not deemed necessary.

The expected system-wide VMT based on existing land use data and national travel demand characteristics over-estimates VMT actually observed on the major road system. This is not surprising, given that the major road system excludes all local roads, I-25 and NM 599. Consequently, it is necessary to develop an adjustment factor to account for this variation. The local trip length adjustment factor is the ratio of actual to projected VMT on the major road system. As shown in Table 12, the average trip length for each land use should be multiplied by a local adjustment factor of 0.453.

Table 12. Local Trip Length Adjustment Factor

Actual Daily VMT on Major Road System	1,324,631
÷ Expected Daily VMT on Major Road System	2,926,755
Ratio of Expected to Actual VMT	0.453

Source: Actual daily VMT from Table 8; expected VMT from Table 11.

The U.S. Department of Transportation's 2009 National Household Travel Survey identifies average trips lengths for residential housing types and for specific trip purposes, including home-to-work trips, doctor/dentist, school/church and shopping trips. The national average trip lengths by trip

purpose have been adjusted by the local adjustment factor calculated in the preceding table to derive local trip lengths, as shown in Table 13.

Table 13. Average Trip Length by Trip Purpose

Land Use Type	Trip Type	National (miles)	Ratio of Local/National	Local (miles)
Single-Family Detached	Single-Family Detached	9.75	0.453	4.42
Multi-Family	Multi-Family	8.62	0.453	3.90
Mobile Home	Mobile Home	6.03	0.453	2.73

Travel Demand Schedule

The result of combining trip generation rates, primary trip factors and average trip lengths is a travel demand schedule that establishes the VMT during the average weekday generated by various land use types per unit of development for Santa Fe. The recommended travel demand schedule is presented in Table 14.

Table 14. Travel Demand Schedule

Land Use Type	Unit	ITE Code	Trip Rate	New Trips	Trip Length	VMT/Unit
Single-Family Detached (avg.)	Dwelling	210	9.52	100%	4.42	21.04
1,500 sq. ft. or less	Dwelling	210	8.56	100%	4.42	18.92
1,501-2,000 sq. ft.	Dwelling	210	9.33	100%	4.42	20.62
2,001-2,500 sq. ft.	Dwelling	210	9.68	100%	4.42	21.39
2,501-3,000 sq. ft.	Dwelling	210	10.15	100%	4.42	22.43
3,001 sq. ft. or more	Dwelling	210	10.74	100%	4.42	23.74
Guest Unit, 750 sf or less	Dwelling	n/a	5.80	100%	3.90	11.31
Multi-Family	Dwelling	220	6.65	100%	3.90	12.97
Mobile Home/RV Park	Space	240	4.99	100%	2.73	6.81
Retail/Commercial	1,000 sq. ft.	820	42.70	66%	2.84	40.02
Office	1,000 sq. ft.	710	11.03	100%	4.35	23.99
Industrial	1,000 sq. ft.	130	6.83	100%	5.43	18.54
Warehousing	1,000 sq. ft.	150	3.56	100%	5.43	9.67
Mini-Warehouse	1,000 sq. ft.	151	2.50	100%	2.99	3.74
Public/Institutional	1,000 sq. ft.	620	7.60	100%	3.84	14.59

Source: Trip rate is average daily trip ends during a weekday from Institute of Transportation Engineers (ITE), *Trip Generation*, 9th ed., 2012; trip rates for single-family by unit size from Table 10; new trip factor for shopping center from ITE, *Trip Generation Handbook*, 2004; average trip lengths from Table 13 (small guest unit uses multi-family trip length).

Cost per Service Unit

The road impact fee is designed to cover the cost of adding capacity to the road system and major intersections. All of the normal components of a road expansion or intersection improvement project are eligible for impact fee funding, including construction of new lanes, reconstruction of

existing lanes and relocation of utilities where necessary as part of a widening project, traffic signals and installation of sidewalks, street lighting, and landscaping along new roads and at intersections. However, transportation impact fees should not be used for ancillary components of an expansion project when not part of a capacity-expanding improvement. For example, installing sidewalks along an existing road, landscaping an existing median or reconstructing an existing road would not be eligible improvements.

The road segment component of the impact fee calculation is based on the cost of new capacity added by recent and planned road widening and extension projects. The road improvement costs exclude the cost of traffic signals, which are addressed in the calculation of the traffic signal component of the transportation impact fee calculation. Recent and planned road improvements are summarized in Table 15. The average cost of the capacity added by these projects, without the two Cerrillos Road projects, is \$345 per vehicle-mile of capacity (VMC). This is double the cost per VMC identified in the 2008 study. The increase may be due in part to the fact that the projects are relatively short (all under one mile), and consequently lack economies of scale. In consideration of this, a more conservative estimate of \$200 per VMC will be used in the impact fee calculations. Under the standard consumption-based methodology, the cost per VMC does not need to be adjusted by the actual VMC/VMT ratio to determine the cost per VMT, because a ratio of one-to-one is assumed.

Table 15. Road Segment Cost per Service Unit

Road Improvement	Miles	Lanes	Capacity		New VMC	Cost	Cost/ VMC
			Before	After			
Siler Rd, Agua Fria-W Alameda St (2010)	0.68	0-2	0	14,800	10,064	\$4,000,000	\$397

Total without Cerrillos	1.75				25,900	\$8,925,000	\$345
Assumed in Fee Calculations							\$200

Source: City of Santa Fe Long Range Planning Division, February 13, 2014; generalized daily capacity estimates from Florida Department of Transportation, 2011 *Quality/Level of Service Handbook*, Table 1.

The traffic signal improvement component of the road impact fee calculation is based on the average cost of traffic signals, which is estimated to be \$350,000. The cost per service unit is calculated by dividing the average cost of a traffic signal by the existing level of service, which is expressed as the ratio of existing traffic to existing traffic signals. As shown in Table 16, the traffic signal cost per service unit is \$31 per VMT.

Table 16. Traffic Signal Cost per Service Unit

Average Cost per Traffic Signal	\$350,000

Capital Facilities Plan

Projected growth from the Land Use Assumptions can be translated into projected impact on the major road system by multiplying existing and projected development in each major land use category by daily vehicle-miles of travel (VMT) associated with each land use. In Table 18, existing and future land uses within Santa Fe's Urban Area have been multiplied by VMT rates and summed to determine reasonable estimates of new daily travel demand that will be generated by anticipated new development within the Urban Area. As can be seen, new development is expected to increase travel demand by 78,160 daily VMT in the service area over the next seven years.

Table 18. Total Daily Travel Demand, 2014-2020

Land Use Type	Unit	Projected Units		VMT/ Unit	Projected VMT		
		2014	2020		2014	2020	New
Single-Family Detached	Dwelling	25,075	26,563	21.04	527,578	558,886	31,308
Multi-Family	Dwelling	14,125	14,737	12.97	183,201	191,139	7,938
Mobile Home	Dwelling	5,200	5,200	6.81	35,412	35,412	0
Retail/Commercial	1,000 sq. ft.	10,198	10,898	40.02	408,124	436,138	28,014
Office	1,000 sq. ft.	8,972	9,322	23.99	215,238	223,635	8,397
Industrial/Warehouse*	1,000 sq. ft.	4,360	4,465	14.11	61,520	63,001	1,481
Public/Institutional	1,000 sq. ft.	2,960	3,030	14.59	43,186	44,208	1,022
Total					1,474,259	1,552,419	78,160

Source: Projected development units from Table 5; VMT per unit from Table 14 (industrial/warehouse is average).

A conservative method of estimating growth-related capital needs uses an approach that is consistent with the consumption-based methodology used to calculate road impact fees in this study. This approach is to multiply new VMT by the capital cost per VMT to get an estimate of the cost of expanding the capacity of the major road system to accommodate projected growth. This technique is applied in Table 19, and it results in estimated capital road needs in the Urban Area of \$18.1 million over the next seven years.

Table 19. Major Road Capital Needs, 2014-2020

New Vehicle-Miles of Travel, 2014-2020	78,160
x Capital Cost per VMT	\$231
Road Capital Needs, 2014-2020	\$18,054,960

Source: New VMT from Table 18; road and signal cost per VMT from Table 17.

The planned road, intersection and traffic signal improvements over the next seven years are summarized in Table 80 in Appendix G. The cost of the planned improvements (\$24.8 million)

exceeds the anticipated capital cost attributed to growth. The actual pace of development may be faster or slower than anticipated by the Land Use Assumptions, resulting in greater or lesser growth-related capital needs. In addition, the planned capital projects and estimated costs may change over time, and some of the costs may be funded from other sources.

Net Cost per Service Unit

In the calculation of the impact of new development on infrastructure costs, credit should be given for non-local funding that will be generated by new development and used to pay for capacity-related capital improvements. Credit should also be provided for taxes that will be paid by new development and used to retire outstanding debt for past major road improvements.

Over the 2011-2014 fiscal year period, approximately \$30.2 million in State and Federal highway funding was available to help pay for capacity-expanding improvements to the major road system in the urban area, as summarized in Table 20.

Table 20. Federal and State Transportation Funding, FY 2011-2014

Project Name	Fed/State
Design and Construction of the NM599/County Road 62 Interchange 1	\$7,304,000
NM475/Washington Ave Intersection Reconstruction 1	\$2,731,456
Cerrillos Road Reconstruction Phase IIC - Camino Carlos Rey to St Michaels Dr	\$11,000,000
Design and Construction of improvements to the I-25/Cerrillos Rd Interchange 2	\$9,060,683
Design of Guadalupe St & Defouri St Bridge Improvements	\$150,000
Total, Road Funding	\$30,246,139

Source: City of Santa Fe Public Works Department, October 22, 2013.

Based on recent trends, the projected annual State and Federal funding for capacity-expanding road projects is approximately \$7.6 million. Dividing the anticipated annual State and Federal funding by existing travel on the major road system yields the annual State and Federal capital funding per VMT. Multiplying annual capacity funding per service unit by the appropriate present value factor provides the equivalent current value of the future stream of funding over the next 25 years, a period that generally corresponds to the period used for long-term debt repayment. The result is a Federal/State funding credit of \$84 per VMT, as shown in Table 21.

Table 21. Federal/State Funding Credit per Service Unit

Federal and State Funding for Capacity, FY 2011-2014	\$30,246,139
÷ Years in Funding Period	4
Annual Federal/State Capacity Funding	\$7,561,535
÷ Existing VMT	1,324,631
Annual Federal/State Capacity Funding per VMT	\$5.71
x Net Present Value Factor (25 years)	14.68
Federal/State Funding Credit per VMT	\$84

Source: Federal/State capacity funding from Table 20; existing road VMT from Table 8; discount rate for present value factor is the average interest rate on state and local bonds for November 2013 from the Federal Reserve at <http://www.federalreserve.gov/releases/h15/data/Monthly>.

The City of Santa Fe has some outstanding debt for past street improvements. The principal and interest payments on the outstanding debt are funded with revenues from the City's one-half cent gross receipts tax dedicated for capital improvements. Dividing the City's outstanding debt by existing travel demand on the major road system results in a debt credit of \$4 per service unit, as

shown in Table 22. This puts existing and new development on the same footing with respect to the portion of their attributable costs that will be paid through future debt service payments made by both existing and new development.

Table 22. Road Debt Credit

Total Outstanding Eligible Debt	\$5,100,580
÷ Existing Major Road System Vehicle-Miles of Travel (VMT)	1,324,631
Road Debt Credit per VMT	\$4

Source: Outstanding debt principal from Table 74; total VMT from Table 8.

Deducting the Federal/State funding credit per VMT and the debt credit per VMT from the capital cost per VMT yields the net cost per service unit, as summarized in Table 23.

Table 23. Road Net Cost per Service Unit

Potential Fee Schedule

The maximum road impact fees that could be charged by the City, based on the data, methodology and assumptions utilized in this report, are presented in Table 24. The updated fees are calculated by multiplying the daily vehicle-miles of travel (VMT) generated by the development by the net cost per VMT calculated above.

Table 24. Road Net Cost Schedule

Land Use Type	Unit	VMT/ Unit	Net Cost/ VMT	Net Cost/ Unit
Single-Family Detached (avg.)	Dwelling	21.04	\$143	\$3,009
1,500 sq. ft. or less	Dwelling	18.92	\$143	\$2,706
1,501-2,000 sq. ft.	Dwelling	20.62	\$143	\$2,949
2,001-2,500 sq. ft.	Dwelling	21.39	\$143	\$3,059
2,501-3,000 sq. ft.	Dwelling	22.43	\$143	\$3,207
3,001 sq. ft. or more	Dwelling	23.74	\$143	\$3,395

Source: Daily VMT per unit from Table 14; net cost per VMT from Table 23.

Comparative Road Fees

The updated road impact fees calculated in this report are compared with the City's current fees in Table 25. In general, the updated fees are lower than the fees calculated in the 2008 study. However, because the current fees were adopted at only 60% of the proportionate fair-share costs identified in the 2008 study, the updated fees are higher than the current adopted fees for most land uses. The comparison to adopted fees does not include the temporary 50% fee reduction for residential uses.

Table 25. Road Impact Fee Comparisons

Land Use Type	Unit	2008 Net Cost/Unit	Adopted Fee (60%)	Updated Fee/Unit	% Change From	
					2008 Net Cost/Unit	Adopted Fee (60%)
Single Family Detached

Source: 2008 net cost per unit is 1.67 times adopted fees from Table 1; updated fees from Table 24.

Potential Revenue

Based on forecast residential and nonresidential construction, the City might expect the road impact fee revenue adopted at the full rate calculated in this report to generate \$10.4 million over the next seven years, as shown in Table 26. These revenue projections assume that the fees are adopted at 100% and that there are no residential waivers or fee reductions, other than for affordable housing.

Table 26. Potential Road Impact Fee Revenue, 2014-2020

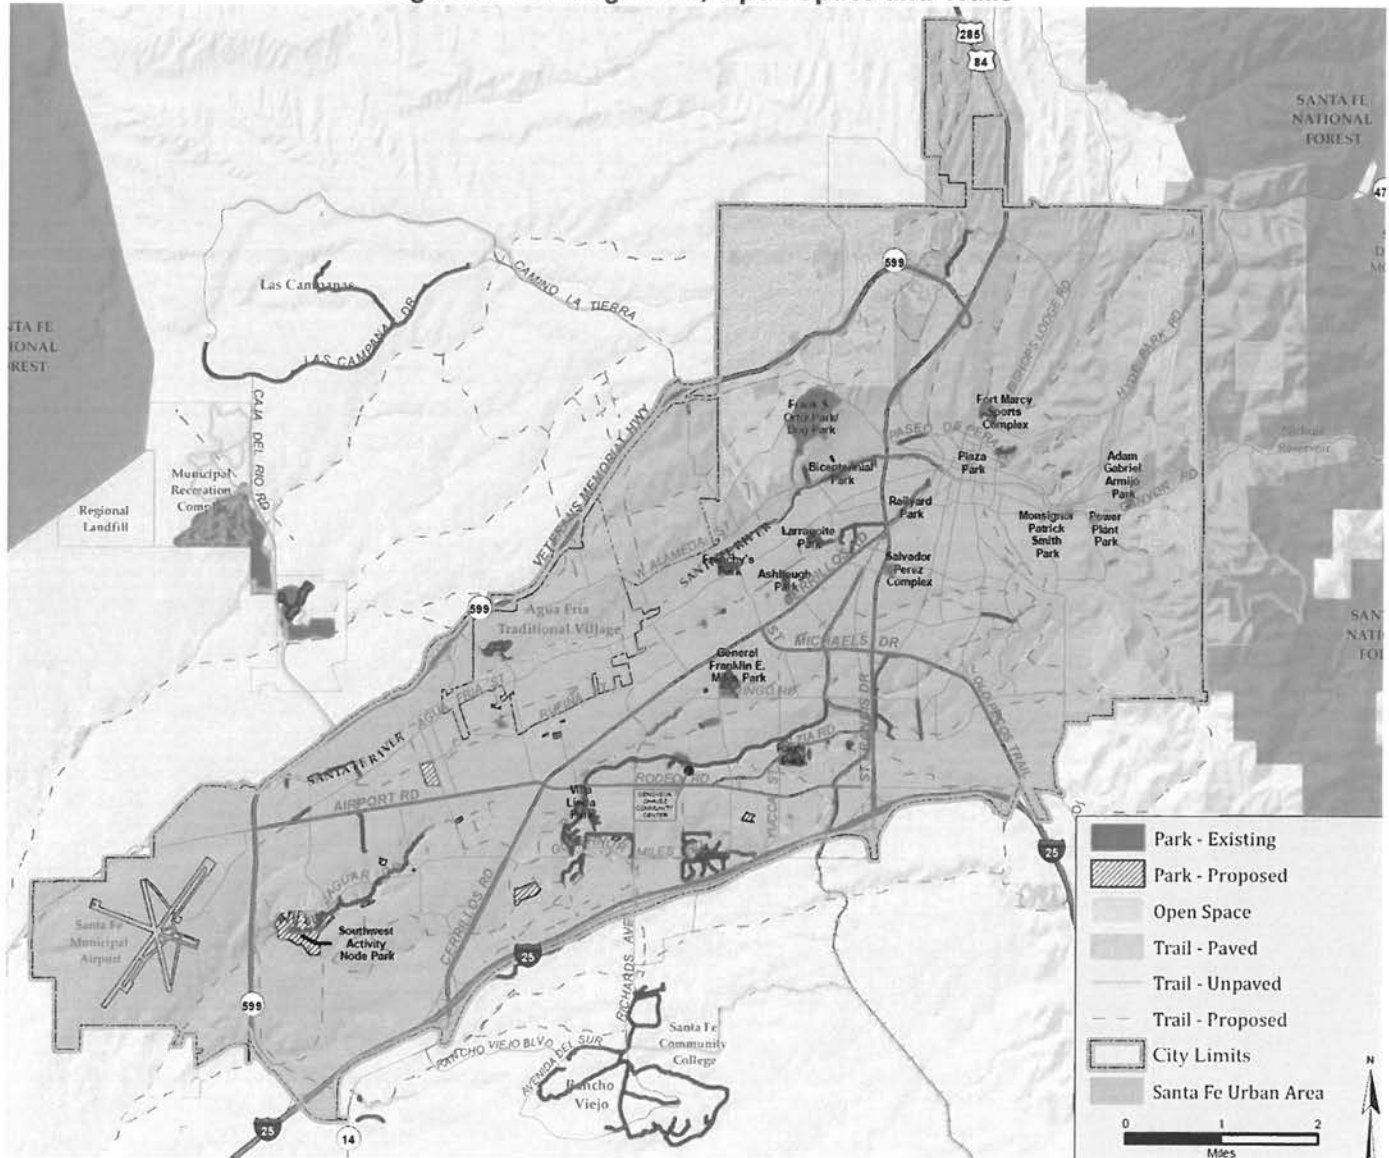

Land Use Type	Unit	New Units	Fee/Unit	Potential Revenue

Subtotal, Nonresidential				\$5,564,755
Total				\$10,352,347

Source: New units from Table 5; fee per unit from Table 24 (industrial/warehouse is average of the two); potential revenue is units times fee per unit, except that residential revenue is reduced by 14.7%, which is the percentage of residential units from 2008-2013 that were exempted as affordable housing from City of Santa Fe Long Range Planning Division, March 11, 2014.

PARKS/TRAILS

This section of the study updates the City's park/trail impact fee. The primary purpose of this study is to update the fees to reflect the current level of service and current costs to provide park facilities. As is currently the practice, this study recommends that the entire Urban Area be included in the service area. The locations of the City's existing parks, open space and trails are illustrated in Figure 5.

Figure 5. Existing Parks, Open Space and Trails

Service Unit

Disparate types of development must be translated into a common unit of measurement that reflects the impact of new development on the demand for park facilities. This unit of measurement is called a “service unit.” The most common service unit used in park impact fee analysis is population. Population estimates are based on three factors: the number of dwelling units, average household sizes for various types of units and occupancy rates. The number of dwelling units can be estimated with some degree of precision, and average household size has been declining somewhat predictably but has been stabilizing in recent years. Occupancy rates, on the other hand, tend to vary significantly over time, and not in predictable directions. Consequently, this report recommends the use of a service unit that avoids the need to make assumptions about occupancy rates. This service unit is the “equivalent dwelling unit” or EDU, which represents the impact of a typical single-family dwelling. By definition, a typical single-family unit represents, on average, one EDU. Other types of units each represent a fraction of an EDU, based on their relative average household sizes.

Because the level of service for park facilities is measured in terms of population, demand for park facilities is proportional to the number of people in a dwelling unit. Consequently, data on average household size for various types of units is a critical component of a park impact fee. These data are presented and analyzed in Appendix B.

As described earlier, the service unit for Santa Fe’s park/trail impact fees is defined as an equivalent dwelling unit, or EDU. An EDU is a unit that has an average household size equivalent to a typical single-family unit in Santa Fe. The EDUs associated with each housing type and unit size category are shown in Table 27.

Table 27. Park/Trail Equivalent Dwelling Unit Multipliers

Housing Type	Avg. HH Size	EDUs/Unit
Single-Family Detached (avg.)	2.19	1.00
1,500 sq. ft. or less	1.95	0.89
1,501-2,000 sq. ft.	2.04	0.93
2,001-2,500 sq. ft.	2.23	1.02
2,501-3,000 sq. ft.	2.35	1.07
3,001 sq. ft. or more	2.50	1.14
Guest Unit, 750 sq. ft. or less	1.66	0.76
Multi-Family	1.90	0.87
Mobile Home	3.04	1.39

Source: Average household size for single-family detached (average), multi-family and mobile home from Table 63; average household sizes by square feet for single-family units from Table 65.

The number of existing and future park/trail service units, as well as the growth in service units, based on the Land Use Assumptions can be determined by multiplying the number of dwelling units by housing type by the park/trail service units per dwelling unit for each housing type. As shown in Table 28, a total of 2,020 new park/trail service units is projected to be added in the Santa Fe Urban Area between 2014 and 2020.

Table 28. Park/Trail Service Units, 2014-2020

Housing Type	Dwelling Units		EDUs/ Unit	Park Service Units (EDUs)		
	2014	2020		2014	2020	New
Single-Family Detached	25,075	26,563	1.00	25,075	26,563	1,488
Multi-Family	14,125	14,737	0.87	12,289	12,821	532
Mobile Home	5,200	5,200	1.39	7,228	7,228	0
Total	44,400	46,500		44,592	46,612	2,020

Source: Dwelling units from Table 5; EDUs/unit from Table 27.

Cost per Service Unit

This study bases the park/trail impact fees on the existing level of service for parks, open space and trails. The level of service is measured in terms of the ratio of the replacement value of existing facilities to the number of existing service units, or park EDUs. The level of service used in calculating the park/trail impact fee relies on the replacement value of existing park land and improvements, rather than on acres, since, for example, an acre of intensively-developed park land is not equivalent to an acre of open space or passive recreation land.

An initial step in determining the current level of service is to identify the current inventory of parks, open space and trails currently provided by the City. A detailed inventory of existing City parks, trails and open space is presented in Appendix D. Based on current unit costs provided by the City, the total replacement cost of existing park land and facilities is about \$128 million, as summarized in Table 29.

Table 29. Park/Trail Replacement Cost

Type of Park Capital Facility	Units	Unit Cost	Total Cost
Park Land and Open Space (acres)	3,073.26	\$16,260	\$49,971,208
Playground	32	\$60,300	\$1,929,600
Picnic Area	41	\$54,300	\$2,226,300
Activity Area	12	\$24,100	\$289,200
Tennis Court	25	\$72,400	\$1,810,000
Soccer Field	9	\$241,200	\$2,170,800
Basketball Court	22	\$48,200	\$1,060,400
Baseball Field	15	\$253,300	\$3,799,500
Softball Field	8	\$253,300	\$2,026,400
Trails - Paved (per mile)	26.09	\$800,000	\$20,872,000
Trails - Soft Surface (per mile)	69.36	\$10,000	\$693,600
Handball Court	1	\$36,200	\$36,200
Volleyball Court	5	\$42,200	\$211,000
Skateboard Park	2	\$313,600	\$627,200
Bicentennial Pool	1	\$1,929,600	\$1,929,600
Salvador Perez Pool and Fitness Center	1	\$3,376,800	\$3,376,800
Genoveva Chavez Community Center	1	\$30,150,000	\$30,150,000
Fort Marcy Recreation Center	1	\$5,065,200	\$5,065,200
Total Replacement Cost			\$128,245,008

Source: Acres and number of facilities from Appendix D, Table 70; miles of trail from Table 71; unit costs from City of Santa Fe Parks Department, January 7, 2014 (pools and community/recreation center costs are estimated replacement costs).

The cost to maintain the existing park level of service is the ratio of the total replacement cost of existing park land and improvements divided by the existing service units. The park cost per service unit is summarized in Table 30.

Table 30. Park/Trail Cost Per Service Unit

Total Replacement Cost	\$128,245,008
÷ Existing Park Service Units (EDUs)	44,592
Park Cost per EDU	\$2,876

Source: Cost from Table 29; existing EDUs from Table 28.

Capital Facilities Plan

A reasonable method of estimating growth-related capital needs is one that is consistent with the methodology used to calculate park/trail impact fees in this study. This approach is to multiply the projected new park EDUs by the capital cost per EDU to get an estimate of the cost of expanding the capacity of the park system to accommodate projected growth. As shown in Table 31, this results in estimated growth-related park capital improvement need over the next seven years of \$5.8 million.

Table 31. Park/Trail Capital Needs, 2014-2020

New Park Service Units (EDUs), 2014-2020	2,020
x Park Cost per EDU	\$2,876
Park Capital Needs, 2014-2020	\$5,809,520

Source: New park EDUs from Table 28; cost per EDU from Table 30.

Park improvements currently planned over the next seven years are summarized in Table 81 in Appendix G. The cost of the planned improvements (\$37.1 million) far exceeds the projected capital cost attributable to growth over the next seven years. The actual pace of development may be faster or slower than anticipated by the Land Use Assumptions, resulting in greater or lesser growth-related capital needs. In addition, the planned capital projects and estimated costs may change over time, and some of the costs may be funded from other sources.

Net Cost per Service Unit

As noted earlier, to avoid double-charging, credit against impact fees should be provided to account for debt service payments by new development that will be used to retire outstanding debt on existing facilities and for outside funding sources available to pay a portion of the capital costs of growth.

The City's primary funding source for park-related capital improvements is revenue bonds repaid primarily with revenues from the City's half-cent capital improvement gross receipts tax (GRT). An analysis of the City's outstanding debt indicates that the debt attributable to past park-related improvements equals 32% of the total estimated replacement cost of all of the City's parks, open space and recreational facilities. In order to account for the outstanding debt, the impact fees must be reduced to ensure that new development is placed on the same footing as existing development in terms of the portion of park costs funded through debt. As shown in Table 32, the debt credit is \$917 per service unit.

Table 32. Park/Trail Debt Credit

Total Outstanding Debt Principal	\$40,885,335
÷ Existing Park Service Units (EDUs)	44,592
Park Debt Credit per EDU	\$917

Source: Outstanding debt from Table 73; EDUs from Table 28.

Although future grant funding is difficult to predict, it is reasonable to assume that the level of funding received over the next seven years will continue to the extent that growth rates are constant. Actual funding received over the last six fiscal years is shown in Table 35 on the following page.

As noted above, it is reasonable to assume that the grant funding received per park/trail service unit in the recent past will continue in the future. Based on this assumption, the City should receive the current present value equivalent of \$407 in grant funding for parks, open space and trails for each new single-family home or park/trail service unit equivalent over the next 25 years, as shown in Table 33.

Table 33. Park/Trail Grant Funding Credit

State/County Funding for Capacity, FY 2008-2013	\$7,411,295
÷ Years in Funding Period	6
Annual State/County Capacity Funding	\$1,235,216
÷ Existing Park Service Units (EDUs)	44,592
Annual State/County Capacity Funding per EDU	\$27.70
x Net Present Value Factor (25 years)	14.68
State/County Funding Credit per EDU	\$407

Source: Capacity funding from Table 35; existing park EDUs from Table 28; discount rate for present value factor is the average interest rate on state and local bonds for November 2013 from the Federal Reserve at <http://www.federalreserve.gov/releases/h15/data/Monthly>.

The City does not have any additional dedicated funding for park capital improvements. As shown in Table 34, deducting the credits for outstanding debt and park grants results in a net park cost of \$1,552 per service unit.

Table 34. Park/Trail Net Cost Per Service Unit

Potential Fee Schedule

The maximum park fees that can be adopted by the City based on this study are derived by multiplying the number of equivalent dwelling units (EDUs) represented by each dwelling unit by the net cost per EDU, as shown in Table 36.

Table 36. Park/Trail Net Cost Schedule

Land Use Type	Unit	EDU/ Unit	Net Cost/ EDU	Net Cost/ Unit
Single-Family Detached (avg.)	Dwelling	1.00	\$1,552	\$1,552
1,500 sq. ft. or less	Dwelling	0.89	\$1,552	\$1,381
1,501-2,000 sq. ft.	Dwelling	0.93	\$1,552	\$1,443
2,001-2,500 sq. ft.	Dwelling	1.02	\$1,552	\$1,583
2,501-3,000 sq. ft.	Dwelling	1.07	\$1,552	\$1,661
3,001 sq. ft. or more	Dwelling	1.14	\$1,552	\$1,769
Guest Unit, 750 sf or less	Dwelling	0.76	\$1,552	\$1,180
Multi-Family	Dwelling	0.87	\$1,552	\$1,350

Source: EDUs per unit from Table 27; net cost per EDU from Table 34.

Comparative Fees

The updated park/trail impact fees calculated in this report are compared with the City's current fees in Table 37. In general, the updated fees are significantly lower than the fees calculated in the 2008 study, due to higher credits for outstanding debt and grant funding. Because the 2008 fees were adopted at only 60% of the proportionate fair-share costs identified in the 2008 study, the updated fees are higher than the current adopted fees. The comparison to adopted fees does not include the temporary 50% fee reduction for residential uses.

Table 37. Park/Trail Impact Fee Comparisons

Land Use Type	Unit	2008 Net Cost/Unit	Adopted Fee (60%)	Updated Fee/Unit	% Change From	
					2008 Net Cost/Unit	Adopted Fee (60%)
Single Family Detached						
Up to 1,500 sq. ft.	Dwelling	\$1,852	\$1,111	\$1,381	-25%	24%
1,501 - 2,000 sq. ft.	Dwelling	\$2,023	\$1,214	\$1,443	-29%	19%
2,001 - 2,500 sq. ft.	Dwelling	\$2,214	\$1,328	\$1,583	-29%	19%
2,501 - 3,000 sq. ft.	Dwelling	\$2,299	\$1,379	\$1,661	-28%	20%
3,001 - 3,500 sq. ft.	Dwelling	\$2,363	\$1,418	\$1,769	-25%	25%
3,501 - 4,000 sq. ft.	Dwelling	\$2,406	\$1,444	\$1,769	-26%	23%
More than 4,000 sq. ft.	Dwelling	\$2,491	\$1,495	\$1,769	-29%	18%
Multi-Family	Dwelling	\$1,618	\$971	\$1,350	-17%	39%

Source: 2008 net cost per unit is 1.67 times adopted fees from Table 1; updated fees from Table 36.

Potential Revenue

Under the updated fee structure, the City would expect to receive about \$2.7 million in park/trail impact fees over the next seven years. This estimate assumes that the updated fees are adopted at the full net cost, that development occurs as anticipated in the Land Use Assumptions, that all new residential development in the Urban Area falls under the City's building permit authority, and that there are no residential fee waivers or reductions, other than for affordable housing.

Table 38. Potential Park/Trail Impact Fee Revenue, 2014-2020

Housing Type	Unit	New Units	Fee/Unit	Potential Revenue
Single-Family Detached	Dwelling	1,488	\$1,552	\$1,969,898
Multi-Family	Dwelling	612	\$1,350	\$704,749
Total				\$2,674,647

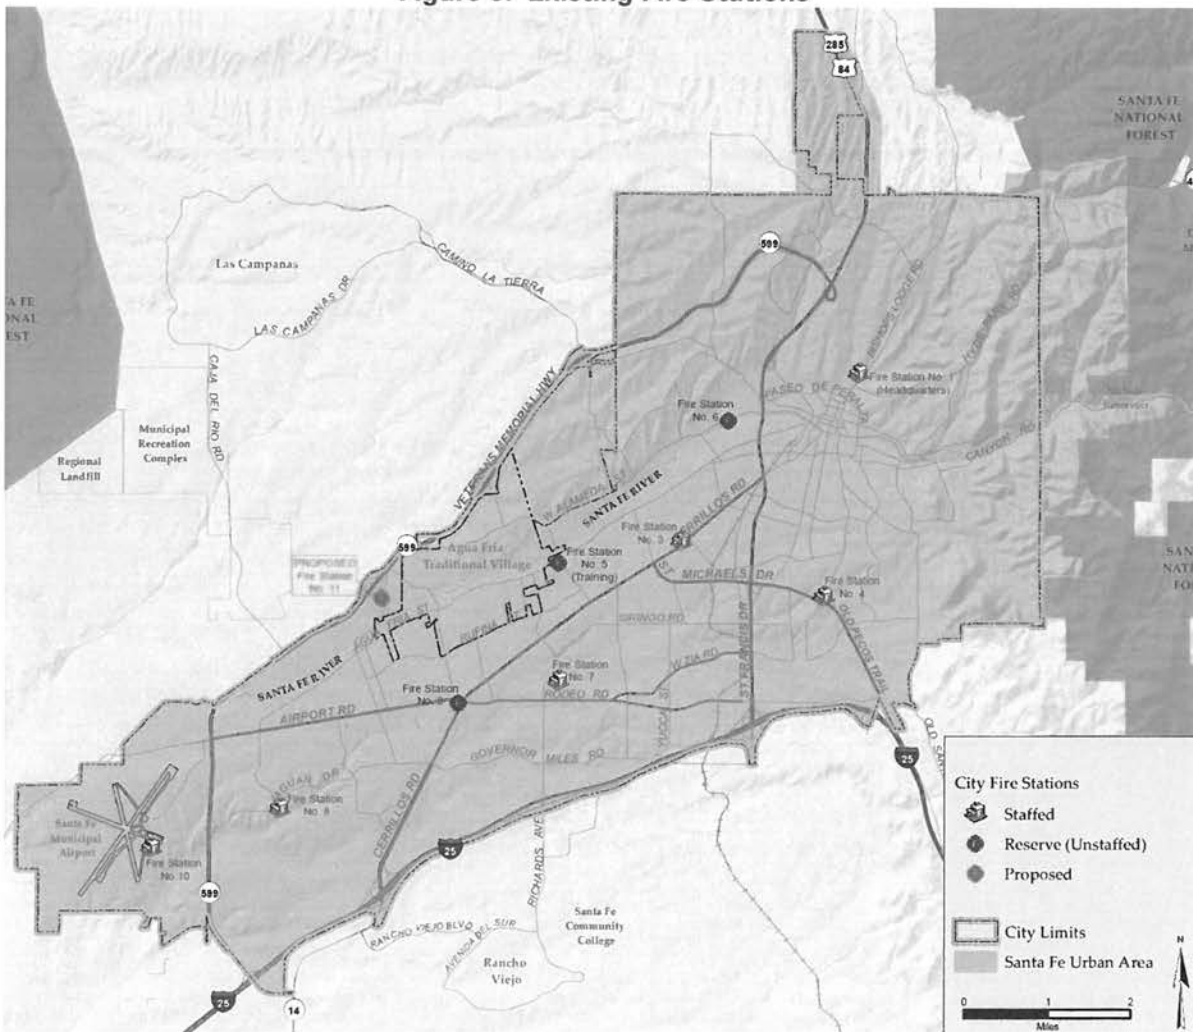

Source: New units from Table 28; fee per unit from Table 34; potential revenue is units times fee per unit, except that residential revenue is reduced by 14.7%, which is the percentage of residential units from 2008-2013 that were exempted as affordable housing from City of Santa Fe Long Range Planning Division, March 11, 2014.

FIRE/EMS

This section updates the City of Santa Fe fire/EMS impact fee. The scope of this update incorporates all eligible firefighting equipment as defined in the New Mexico Development Fees Act, which authorizes cities to establish impact fees for “buildings for fire, police and rescue, and essential equipment costing \$10,000 or more and having a ten-year life expectancy.”

The City of Santa Fe Fire Department operates five primary fire stations, one airport station that houses the aircraft rescue and firefighting apparatus, two supplemental facilities and a repair service center/ training facility. The existing fire/EMS facilities are shown in Figure 6.

Figure 6. Existing Fire Stations

Supplemental facilities provide back-up for the primary facilities. One of the supplemental facilities, located on West Alameda Street, is primarily a Police Department substation; the Fire Department uses it for the staging of an additional fire truck that can be used in the event of a major fire. The

other supplemental facility, located on Camino Entrada, was originally a primary fire station, but became a supplemental facility upon completion of the new Station #8 on Jaguar Drive. Fire Station #10 is located at the airport, and consists of one fire truck located in aircraft hangar space that is provided to the Fire Department.

In addition to fire suppression, the Fire Department provides emergency medical services (EMS), enforces City fire codes, reviews building plans, investigates fires and provides fire safety and injury prevention education. The Department is also responsible for response to and initial mitigation of reported hazardous materials incidents, technical rescues that include high angle rescue, trench rescue, swift-water rescue and building collapse and Wildland Urban Interface Fires to initiate incident command and initial fire attack.

Service Area

While fire and rescue units and ambulances may be dispatched from a station primarily to calls within that station's fire district, which is the station's primary response area, these units also respond to calls in neighboring districts when needed. In addition, the headquarters and training facilities are centralized. Consequently, fire/EMS facilities constitute an interrelated system that provides service throughout the City's jurisdiction, which is appropriately defined as a single service area.

Service Unit

Disparate types of development must be translated into a common unit of measurement that reflects the impact of new development on the demand for fire/EMS service. This common unit of measurement is referred to as a "service unit." Service units create the link between the supply of fire capital facilities and the demand for such facilities generated by new development.

The two most common methodologies used in calculating fire/EMS impact fees are the "calls-for-service" approach and the "functional population" approach. While annual call data are available for fire/EMS calls, this study continues to use functional population. Typically, the majority of fire calls are responses to emergencies, which are associated with the presence of people, rather than structural fires. In addition, almost 40 percent of calls in Santa Fe's Fire Department are not directly attributed to a land use; such calls are likely responses to motor-vehicle accidents, which are related to movement between land uses.

The functional population approach is a more generalized approach than calls-for-service, and it presumes that the demand for fire services is strongly related to the presence of people at the site of a land use. Functional population is analogous to the concept of "full-time equivalent" employees. It represents the number of "full-time equivalent" people present at the site of a land use, and it is used for the purpose of determining the impact of a particular development on the need for fire facilities. For residential development, functional population is simply average household size times the percent of time people are assumed to spend at home. For nonresidential development, functional population is based on a formula that factors trip generation rates, average vehicle occupancy and average number of hours spent by visitors at a land use. Functional population multipliers by land use type and total existing and projected functional population for the Urban Area are presented in Appendix C.

Cost per Service Unit

Fire/EMS impact fees are designed to charge new development the cost of providing the same level of service that is provided to existing development. The existing level of service for fire/EMS facilities is based on the replacement cost of existing facilities. The replacement cost of the existing Fire Department facilities can be determined based on the most recent construction costs related to the construction of Station No. 3. Based on the actual construction cost, this station cost \$294 per square foot. However, because this station required a significant amount of site work, the Department estimates that the two new stations will cost somewhat less, about \$238 per square foot. The total building and land replacement cost for the Fire Department's existing City-owned facilities is \$19.4 million, as shown in Table 39.

Table 39. Fire/EMS Facility Replacement Cost

Station No.	Address	Building Sq. Feet	Land Acres	Building Value	Land Value	Total Value
1	200 Murales Road	11,440	1.20	\$2,718,373	\$204,000	\$2,922,373
3A	1751 Cerrillos Road	3,124	1.00	\$742,325	n/a	\$742,325
3	1751 Cerrillos Road	10,605	1.00	\$2,519,960	\$189,600	\$2,709,560

5	1130 Siler Road	10,156	5.00	\$2,413,269	\$749,000	\$3,162,269
6	1030 W. Alameda	470	0.20	\$111,681	\$34,000	\$145,681
7	2391 Richards Ave	14,440	2.25	\$3,431,233	\$382,500	\$3,813,733
8	6796 Jaguar Drive	10,241	2.52	\$2,433,466	\$342,000	\$2,775,466
9	2501 Camino Entrada	2,100	3.00	\$499,002	\$540,000	\$1,039,002
10	121 Aviation Drive (leased)	n/a	n/a	n/a	n/a	n/a
Total		70,818	17.17	\$16,827,773	\$2,610,700	\$19,438,473

Source: Building square feet from City of Santa Fe Fire Department, November 4, 2013; land and land value from City of Santa Fe Fire Department, March 13, 2014; building value based on \$237.62 per square foot from City of Santa Fe Fire Department, November 4, 2013.

The New Mexico Development Fees Act authorizes the use of impact fees for all essential fire-fighting and EMS equipment costing \$10,000 or more and having a life expectancy of at least ten years. Table 40 lists the current capital equipment that is eligible for impact fee funding under the New Mexico Development Fees Act. The total replacement cost for eligible equipment is \$8.3 million.

Table 40. Fire/EMS Equipment Replacement Cost

Apparatus/Equipment	Units	Cost per Unit	Total Cost
Pumper	8	\$450,000	\$1,500,000
Quint	3	\$750,000	\$1,400,000
Ambulance	10	\$175,000	\$175,000
Rescue Vehicle	1	\$750,000	\$175,000
Brush Truck	3	\$160,000	\$2,800,000
Haz. Mat. Truck & Trailer	1	\$550,000	\$1,100,000
Pump Simulator	1	\$90,000	\$750,000
Tire Machine	1	\$10,000	\$280,000
Posi-Check	1	\$15,000	\$90,000
Service Truck	1	\$65,000	\$10,000
Total Replacement Cost			\$8,280,000

Source: Fire/EMS equipment, number of units and cost per unit from City of Santa Fe Fire Department, November 4, 2013.

The fire/EMS impact fee is based on the replacement value of existing capital facilities divided by the total number of service units associated with the City’s functional population. As shown in Table 41, the replacement cost for fire and EMS facilities and equipment is \$299 per service unit.

Table 41. Fire/EMS Cost Per Service Unit

Fire/EMS Facility Replacement Cost	\$19,438,473
Fire/EMS Equipment Replacement Cost	\$8,280,000
Total Fire/EMS Replacement Cost	\$27,718,473
÷ Existing Functional Population	92,577
Fire/EMS Cost per Functional Population	\$299

Source: Fire/EMS facility replacement cost from Table 39; fire/EMS equipment replacement cost from Table 40; existing functional population from Table 69.

Capital Facilities Plan

The magnitude of growth-related fire/EMS capital needs can be estimated by multiplying the anticipated growth in service units associated by the existing level of service cost per unit. As shown in Table 42, this results in estimated fire/EMS capital improvement needs over the next seven years of about \$1.4 million.

Table 42. Fire/EMS Capital Needs, 2014-2020

New Functional Population, 2014-2020	4,557
x Fire/EMS Cost per Functional Population	\$299
Fire/EMS Capital Needs, 2014-2020	\$1,362,543

Source: New functional population Table 69, Appendix C; cost per functional population from Table 41.

According to the Fire Department, existing fire/EMS facilities and equipment are only marginally adequate based on the population served, travel distance, and call volume. Current plans call for the construction of one or two additional fire stations over the next seven years to better serve the expanding southern and southwestern areas, and to remodel and expand Station No. 5. New fire-fighting apparatus will be needed to equip the proposed stations.

As summarized in Table 82 in Appendix G, planned fire/EMS improvements identified and eligible to receive impact fee funding over the next seven years total about \$7.4 million. All of the identified improvements would be eligible for funding with fire/EMS impact fees. However, only about 18% of the planned project costs can be attributed to projected growth over the next seven years, based on the Land Use Assumptions and the existing level of service.

Net Cost per Service Unit

In the calculation of the impact of new development on infrastructure costs, credit should be given for non-local funding that will be generated by new development and used to pay for capacity-related capital improvements. Credit should also be provided for taxes that will be paid by new development and used to retire outstanding debt for past fire/EMS facility improvements.

The City of Santa Fe has some outstanding debt for past fire/EMS capital improvements, including construction of a fire station and purchase of fire apparatus. As shown in Table 43, dividing the outstanding debt by existing service units results in the debt credit per service unit. This puts existing and new development on the same footing with respect to the portion of their attributable costs that will be paid through future debt service payments made by both existing and new development.

Table 43. Fire/EMS Debt Credit

Total Outstanding Eligible Debt	\$3,895,495
÷ Existing Functional Population	92,577
Fire/EMS Debt Credit per Functional Population	\$42

Source: Outstanding fire-related debt from Table 74 in Appendix E; existing functional population from Table 69, Appendix C.

The City has received some grants for fire protection, EMS and related services in recent years. However, some of these grants were for operating costs, or for equipment that is not eligible for impact fee funding under the Development Fees Act. Deducting the amounts for operational costs or minor equipment, the eligible grant amounts received over last six years for impact fee-eligible capital totaled \$2.6 million, as shown in Table 44.

Table 44. Fire/EMS Grant Funding, FY 2008-2013

Fiscal Year	Funding Source	Project Description	Amount
2008	Federal	Assistance to Firefighters Grant	\$137,167
2008	State	Fire Protection	\$471,847
2009	State	Fire Protection	\$461,076
2010	State	Fire Protection	\$398,504
2011	State	Fire Protection	\$616,322
2009	State	Fire Station #3	\$138,600
2009	State	Fire Station #3	\$346,500
2009	State	Emergency Medical Service	\$20,000
2010	State	Emergency Medical Service	\$29,000
Total Funding, FY 2008-2013			\$2,619,016

Source: City of Santa Fe Finance Department, February 20, 2014.

Assuming that the grant funding received over the last six years for impact fee-eligible fire/EMS capital improvements will continue to increase proportional to the amount of development in Santa Fe, the City will receive the present value equivalent of \$69 per service unit over the next 25 years, as shown in Table 45.

Table 45. Fire/EMS Grant Funding Credit Per Service Unit

Federal and State Funding for Capacity, FY 2008-2013	\$2,619,016
÷ Years in Funding Period	6
Annual Federal/State Capacity Funding	\$436,503
÷ Existing Functional Population	92,577
Annual Federal/State Funding per Functional Population	\$4.72
x Net Present Value Factor (25 years)	14.68
Federal/State Funding Credit per Functional Population	\$69

Source: Grant funding from Table 44; existing functional population from Table 69 in Appendix C; discount rate for present value factor is the average interest rate on state and local bonds for November 2013 from the Federal Reserve at <http://www.federalreserve.gov/releases/h15/data/Monthly>.

Deducting the credits for outstanding debt and grants from the capital cost yields the net fire/EMS cost per service unit, as summarized in Table 46.

Table 46. Fire/EMS Net Cost Per Service Unit

Fire/EMS Cost per Functional Population	\$299
- Debt Credit per Functional Population	-\$42
- Grant Funding Credit per Functional Population	-\$69
Fire/EMS Net Cost per Functional Population	\$188

Source: Cost from Table 41; debt credit from Table 43; grant credit from Table 44.

Potential Fee Schedule

The maximum fire/EMS impact fees that may be charged by the City of Santa Fe based on the data, assumptions and methodology used in this report are shown in Table 47.

Table 47. Fire/EMS Net Cost Schedule

Land Use Type	Unit	Func. Pop/ Unit	Net Cost/ Func. Pop.	Net Cost/ Unit
Single-Family Detached (avg.)	Dwelling	1.314	\$188	\$247
1,500 sq. ft. or less	Dwelling	1.170	\$188	\$220
1,501-2,000 sq. ft.	Dwelling	1.224	\$188	\$230
2,001-2,500 sq. ft.	Dwelling	1.338	\$188	\$252
2,501-3,000 sq. ft.	Dwelling	1.410	\$188	\$265
3,001 sq. ft. or more	Dwelling	1.500	\$188	\$282
Guest Unit, 750 sf or less	Dwelling	0.996	\$188	\$187
Multi-Family	Dwelling	1.140	\$188	\$214

Warehousing	1,000 sq. ft.	0.180	\$188	\$34
Mini-Warehouse	1,000 sq. ft.	0.167	\$188	\$31
Public/Institutional	1,000 sq. ft.	0.863	\$188	\$162

Source: Functional population per unit from Table 68 in Appendix C; net cost per functional population from Table 46.

Comparative Fees

The updated fire/EMS impact fees calculated in this report are compared with the City's current fees in in Table 48. In general, the updated fees are slightly higher than the fees calculated in the 2008 study for residential and retail uses and lower for other nonresidential uses. Because the 2008 fees were adopted at only 60% of the proportionate fair-share costs identified in the 2008 study, the updated fees are significantly higher than the current adopted fees most land uses other than warehouse and mini-warehouse. The comparison to adopted fees does not include the temporary 50% fee reduction for residential uses.

Table 48. Fire/EMS Impact Fee Comparisons

Land Use Type	Unit	2008 Net Cost/Unit	Adopted Fee (60%)	Updated Fee/Unit	% Change From	
					2008 Net Cost/Unit	Adopted Fee (60%)
Single Family Detached						
Up to 1,500 sq. ft.	Dwelling	\$209	\$125	\$220	5%	76%
1,501 - 2,000 sq. ft.	Dwelling	\$227	\$136	\$230	1%	69%
2,001 - 2,500 sq. ft.	Dwelling	\$250	\$150	\$252	1%	68%
2,501 - 3,000 sq. ft.	Dwelling	\$258	\$155	\$265	3%	71%
3,001 - 3,500 sq. ft.	Dwelling	\$265	\$159	\$282	6%	77%
3,501 - 4,000 sq. ft.	Dwelling	\$271	\$163	\$282	4%	73%
More than 4,000 sq. ft.	Dwelling	\$281	\$169	\$282	0%	67%
Multi-Family	Dwelling	\$183	\$110	\$214	17%	95%
Retail/Commercial	1,000 sq. ft.	\$368	\$221	\$384	4%	74%
Office	1,000 sq. ft.	\$207	\$124	\$180	-13%	45%
Industrial	1,000 sq. ft.	\$124	\$74	\$78	-37%	5%
Warehouse	1,000 sq. ft.	\$78	\$47	\$34	-56%	-28%
Mini-Warehouse	1,000 sq. ft.	\$78	\$47	\$31	-60%	-34%
Public/Institutional	1,000 sq. ft.	\$207	\$124	\$162	-22%	31%

Source: 2008 net cost per unit is 1.67 times adopted fees from Table 1; updated fees from Table 47.

Potential Revenue

If adopted at the full updated amounts, the fire/EMS impact fees could generate \$0.77 million over the next seven years, based on the development projected in the Land Use Assumptions, as shown in Table 49. These revenue projections assume no residential waivers or fee reductions, other than for affordable housing.

Table 49. Potential Fire/EMS Impact Fee Revenue, 2014-2020

Land Use Type	Unit	New Units	Fee/Unit	Potential Revenue
Single-Family Detached	Dwelling	1,488	\$247	\$313,508
Multi-Family	Dwelling	612	\$214	\$111,716
Subtotal, Residential				\$425,224
Retail/Commercial	1,000 sq. ft.	700	\$384	\$268,800
Office	1,000 sq. ft.	350	\$180	\$63,000
Industrial/Warehouse	1,000 sq. ft.	105	\$56	\$5,880
Public/Institutional	1,000 sq. ft.	70	\$162	\$11,340
Subtotal, Nonresidential				\$349,020
Total				\$774,244

Source: New units from Table 5; fee/unit from Table 47; potential revenue is units times fee per unit, except that residential revenue is reduced by 14.7%, which is the percentage of residential units from 2008-2013 that were exempted as affordable housing from City of Santa Fe Long Range Planning Division, March 11, 2014..

POLICE

This section updates the City of Santa Fe police impact fee. The Santa Fe Police Department was originally founded in 1851, and is responsible for upholding the law within the jurisdictional boundaries of the City of Santa Fe. The Police Department utilizes the “community policing” concept by operating two neighborhood community substations. Current substations include the Administrative Complex at Siringo Road and the West Alameda station. The West Alameda substation is a shared facility; the Fire Department stages a fire truck at this facility for use in cases of emergencies. In addition to utilizing community substations, the Police Department maintains two other facilities, the main headquarters and the professional standards/internal affairs building.

Service Area

While police substations do have a primary response area, officers respond to calls on a community-wide basis. In addition, the headquarters and training facilities are centralized. Consequently, police facilities constitute an interrelated system that provides service throughout the City’s jurisdiction, which, combined with the City’s Urban Area, is appropriately defined as a single service area.

Service Unit

Disparate types of development must be translated into a common unit of measurement that reflects the impact of new development on the demand for police protection. This common unit of measurement is referred to as a “service unit.” Service units create the link between the supply of capital facilities and the demand for such facilities generated by new development.

The two most common methodologies used in calculating police impact fees are the “calls-for-service” approach and the “functional population” approach. While annual call data are available for police calls, this study uses functional population in order to allocate police capital costs among more specific land-use categories. The functional population approach is a more generalized approach than calls-for-service, and it presumes that the demand for police services is strongly related to the presence of people at the site of a land use. Functional population is analogous to the concept of “full-time equivalent” employees. It represents the number of “full-time equivalent” people present at the site of a land use, and it is used for the purpose of determining the impact of a particular development on the need for police facilities. For residential development, functional population is simply average household size times the percent of time people are assumed to spend at home. For nonresidential development, functional population is based on a formula that factors trip generation rates, average vehicle occupancy and average number of hours spent by visitors at a land use. Functional population multipliers by land use type and total existing and projected functional population for the Urban Area are presented in Appendix C.

Cost per Service Unit

Police impact fees are designed to charge new development the cost of providing the same level of service that is provided to existing development. The existing level of service for police facilities is based on the replacement cost of existing facilities. The total building and land replacement cost for the Police Department’s existing facilities is \$10.45 million, as shown in Table 50.

Table 50. Police Facility Replacement Cost

Station	Location	Building (sq. ft.)	Land (acres)	Building Value	Land Value	Total Value
Police Records	2651 Siringo Rd.	2,610	1.00	\$430,650	\$212,500	\$643,150
Alameda Substation	1030 West Alameda St	760	0.90	\$125,400	\$191,250	\$316,650
Frenchy's Park Substation	2011 Agua Fria St.	558	0.20	\$78,120	\$40,000	\$118,120
Internal Affairs	2509 Camino Entrada	1680	0.60	\$277,200	\$112,500	\$389,700
Police Headquarters	2515 Camino Entrada	25,560	2.30	\$4,734,900	\$2,761,875	\$7,496,775
Police Evidence Impound Lot	4201 Huey Road	3,684	1.18	\$1,300,000	\$184,994	\$1,484,994
Total		34,852	6.18	\$6,946,270	\$3,503,119	\$10,449,389

Source: City of Santa Fe Facility Division, November 4, 2013.

The New Mexico Development Fees Act authorizes the use of impact fees for all essential police equipment costing \$10,000 or more and having a life expectancy of at least ten years. The table below lists the current capital equipment that is eligible for impact fee funding under the New Mexico Development Fees Act. As shown in Table 51, the total replacement cost for eligible equipment is \$2.02 million.

Table 51. Police Equipment Replacement Cost

Major Equipment	Total Cost
Firearms Training System	\$91,000
Firearms Moving Target System	\$14,000
SWAT Rescue Truck	\$55,000
SWAT Equipment	\$390,000
EOD Equipment	\$663,000
FARBER Mobile Command Post	\$600,000
Mobile Crime Scene Truck	\$202,674
Total	\$2,015,674

Source: City of Santa Fe Police Department, November 4, 2013.

The police protection impact fee is based on the replacement value of existing capital facilities divided by the total number of service units associated with the City's functional population. As shown in Table 52, the replacement cost for police facilities and equipment is \$135 per service unit.

Table 52. Police Cost Per Service Unit

Police Facility Replacement Cost	\$10,449,389
Police Equipment Replacement Cost	\$2,015,674
Total Police Replacement Cost	\$12,465,063
÷ Existing Functional Population	92,577
Police Cost per Functional Population	\$135

Source: Police facility replacement cost from Table 50; police equipment replacement cost from Table 51; existing functional population from Table 69 in Appendix C.

Capital Facilities Plan

The magnitude of growth-related police protection capital needs can be estimated by multiplying the anticipated growth in service units by the existing level of service cost per unit. As shown in Table 53, this results in estimated police protection capital improvement needs over the next seven years of about \$0.6 million.

Table 53. Police Capital Needs, 2014-2020

New Functional Population, 2014-2020	4,557
x Police Cost per Functional Population	\$135
Police Capital Needs, 2014-2020	\$615,195

Source: New functional population Table 69, Appendix C; cost per functional population from Table 52.

According to the Police Department, existing police facilities and equipment are only marginally adequate based on the population served and call volume. Current plans call for the construction of a new substation, expansion of professional standards and records facilities, and Phase III of the addition to the main police facility over the next seven years.

As summarized in Table 83 in Appendix G, planned police improvements identified and eligible to receive impact fee funding over the next seven years total about \$0.65 million. All of the identified improvements would be eligible for funding with police impact fees. However, only about 95% of the planned project costs can be attributed to projected growth over the next seven years, based on the Land Use Assumptions and the existing level of service.

Net Cost per Service Unit

In the calculation of the impact of new development on infrastructure costs, credit should be given for non-local funding that will be generated by new development and used to pay for capacity-related capital improvements. Credit should also be provided for taxes that will be paid by new development and used to retire outstanding debt for past police facility improvements.

The City of Santa Fe has some outstanding debt for past police protection capital improvements. As shown in Table 54, dividing the outstanding debt by existing service units results in the debt credit per service unit. This puts existing and new development on the same footing with respect to the portion of their attributable costs that will be paid through future debt service payments made by both existing and new development.

Table 54. Police Debt Credit

Total Outstanding Eligible Debt	\$2,465,460
÷ Existing Functional Population	92,577
Police Debt Credit per Functional Population	\$27

Source: Outstanding police-related debt from Table 74 in Appendix E; existing functional population from Table 69, Appendix C.

The City has received some grants for police protection in recent years. However, some of these grants were for operating costs, or for equipment that is not eligible for impact fee funding under the Development Fees Act. Deducting the amounts for operational costs or minor equipment, the eligible grant amounts received over last six years for impact fee-eligible capital totaled \$1.1 million, as shown in Table 55.

Table 55. Police Grant Funding, FY 2008-2013

Fiscal Year	Funding Source	Project Description	Amount
2008	State	Public Safety Building (Police Main Facility)	\$691,502
2009	State	Public Safety Building (Police Main Facility)	\$298,498
2013	State	Santa Fe Police Station	\$107,766
Total Funding, FY 2008-2013			\$1,097,766

Source: City of Santa Fe Finance Department, February 20, 2014.

Assuming that the grant funding received over the last six years for impact fee-eligible police protection capital improvements will continue to increase proportional to the amount of development in Santa Fe, the City will receive the present value equivalent of \$29 per service unit over the next 25 years, as shown in Table 56.

Table 56. Police Grant Funding Credit Per Service Unit

Federal and State Funding for Capacity, FY 2008-2013	\$1,097,766
÷ Years in Funding Period	6
Annual Federal/State Capacity Funding	\$182,961
÷ Existing Functional Population	92,577
Annual Federal/State Funding per Functional Population	\$1.98
x Net Present Value Factor (25 years)	14.68
Federal/State Funding Credit per Functional Population	\$29

Source: Grant funding from Table 55; existing functional population from Table 69 in Appendix C; discount rate for present value factor is the average interest rate on state and local bonds for November 2013 from the Federal Reserve at <http://www.federalreserve.gov/releases/h15/data/Monthly>.

Deducting the credits for outstanding debt and grants from the capital cost yields the net police cost per service unit, as summarized in Table 57.

Table 57. Police Net Cost Per Service Unit

Police Cost per Functional Population	\$135
- Debt Credit per Functional Population	-\$27
- Grant Funding Credit per Functional Population	-\$29
Police Net Cost per Functional Population	\$79

Source: Cost from Table 52; debt credit from Table 54; grant credit from Table 55.

Potential Fee Schedule

The maximum police impact fees that may be charged by the City of Santa Fe based on the data, assumptions and methodology used in this report are shown in Table 58.

Table 58. Police Net Cost Schedule

Land Use Type	Unit	Func. Pop/ Unit	Net Cost/ Func. Pop.	Net Cost/ Unit
Single-Family Detached (avg.)	Dwelling	1.314	\$79	\$104
1,500 sq. ft. or less	Dwelling	1.170	\$79	\$92
1,501-2,000 sq. ft.	Dwelling	1.224	\$79	\$97
2,001-2,500 sq. ft.	Dwelling	1.338	\$79	\$106
2,501-3,000 sq. ft.	Dwelling	1.410	\$79	\$111

Source: Functional population per unit from Table 68 in Appendix C; net cost per functional population from Table 57.

Comparative Fees

The updated police impact fees calculated in this report are compared with the City's current fees in Table 59. In general, the updated fees are higher than the fees calculated in the 2008 study for residential and retail uses and the same or lower for other nonresidential uses. Because the 2008 fees were adopted at only 60% of the proportionate fair-share costs identified in the 2008 study, the updated fees are significantly higher than the current adopted fees for all land uses other than warehouse and mini-warehouse.

Table 59. Police Impact Fee Comparisons

Land Use Type	Unit	2008 Net Cost/Unit	Adopted Fee (60%)	Updated Fee/Unit	% Change From	
					2008 Net Cost/Unit	Adopted Fee (60%)
Single Family Detached						
Up to 1,500 sq. ft.	Dwelling	\$74	\$44	\$92	24%	109%
1,501 - 2,000 sq. ft.	Dwelling	\$80	\$48	\$97	21%	102%

Warehouse	1,000 sq. ft.	\$27	\$16	\$14	-48%	-13%
Mini-Warehouse	1,000 sq. ft.	\$27	\$16	\$13	-52%	-19%
Public/Institutional	1,000 sq. ft.	\$73	\$44	\$68	-7%	55%

Source: 2008 net cost per unit is 1.67 times adopted fees from Table 1; updated fees from Table 58.

Potential Revenue

If adopted at the full updated amounts, police impact fees could generate \$0.33 million over the next seven years, based on the development projected in the Land Use Assumptions, as shown in Table 60. These revenue projections assume no residential waivers or fee reductions, other than for affordable housing.

Table 60. Potential Police Impact Fee Revenue, 2014-2020

Land Use Type	Unit	New Units	Fee/Unit	Potential Revenue
Single-Family Detached	Dwelling	1,488	\$104	\$132,003
Multi-Family	Dwelling	612	\$90	\$46,983
Subtotal, Residential				\$178,986
Retail/Commercial	1,000 sq. ft.	700	\$161	\$112,700
Office	1,000 sq. ft.	350	\$76	\$26,600
Industrial/Warehouse	1,000 sq. ft.	105	\$24	\$2,520

APPENDIX B: AVERAGE HOUSEHOLD SIZE

The 2000 U.S. Census provided data on average household sizes by housing types based on a robust sample consisting of one in six dwelling units. The 2000 household sizes for the City of Santa Fe are shown in Table 62.

Table 62. Average Household Size by Housing Type, 2000

Housing Type	Household Population	Occupied Units	Average HH Size
Single-Family Detached	38,868	16,410	2.37
Single-Family Attached	5,177	2,913	1.78
Multi-Family	13,047	7,131	1.83
Mobile Home	3,239	1,065	3.04
Total	60,331	27,519	2.19

Source: 2000 U.S. Census SF-3 data (1-in-6 sample) for the City of Santa Fe.

The Census Bureau has since replaced the sample data collected during the decennial census with the annual American Housing Survey, which conducts a sample of 1% of dwelling units each year. The most current data from the American Housing Survey are provided in a 5% sample dataset, consisting of 1% samples collected in 2008 through 2012. These data do not provide household population for single-family detached units separately from single-family attached units (i.e., townhouses). However, the 2000 Census data presented in the preceding table shows that single-family attached units in Santa Fe have an average household size that is very similar to other types of multi-family units, such as apartments and condominiums. Using this knowledge, updated average household sizes by housing type for Santa Fe can be derived from the American Community Survey data, as shown in Table 63.

Table 63. Average Household Size by Housing Type, 2008-2012

Housing Type	Household Population	Occupied Units	Average HH Size
Single-Family Detached	n/a	18,618	2.19
Single-Family Attached	n/a	2,980	1.90
Single-Family Detached/Attached	46,361	21,598	2.15
Other Multi-Family	15,417	8,102	1.90
Mobile Home	4,707	1,546	3.04
Total	66,485	31,246	2.13

Source: U.S. Census, American Community Survey, 2008-2012 for City of Santa Fe (single-family attached assigned same average household size as other multi-family).

In the 2008 study, average household sizes by square footage ranges for single-family units were estimated using (1) census micro data for Santa Fe County and Los Alamos County to determine average household size by bedrooms (normalized for the City of Santa Fe overall average household size), and (2) realtor listings of homes for sale to determine average dwelling unit size by bedrooms. The two data sets were combined by taking the realtor data set and assuming the average household size for the number of bedrooms in the unit (e.g., each 3-bedroom unit was assumed to have the average number of residents for all 3-bedroom units). Finally, linear regression analysis was performed to develop an equation relating average household size to unit square feet, and the midpoints of the size categories was used as the average household size for each size range.

While the approach used in the 2008 study was reasonable and had the advantage of relying solely on local data, its weakness is that neither data set contains both of the key variables – the census data lack information on the size of the unit, and the realtor data lack information on the number of persons in the unit. Consequently, the 2008 analysis had to utilize an intervening variable – the number of bedrooms in the unit.

A simpler and more direct approach is to utilize regional or national data from the American Housing Survey, sponsored by the U.S. Department of Housing and Urban Development and conducted by the U.S. Census Bureau. The most recent survey was done in 2011. This survey provides data on the number of residents and the square footage of a sample of individual housing units. Regional data for the Western Census Region, which includes New Mexico, can also be used and shows a very similar pattern. Average household sizes by dwelling unit size can be converted to Equivalent Dwelling Units (EDUs), with one EDU representing the average number of persons residing in an occupied single-family detached unit. These national and regional EDU multipliers are compared to those used in the 2008 study in Table 64.

Table 64. Equivalent Dwelling Unit Multipliers

Single-Family Unit Size (Heated Living Area)	2008 Study	Amer. Housing Survey	
		Western Region	Entire U.S.
1,500 sq. ft. or less	0.87	0.89	0.88
1,501-2,000 sq. ft.	0.95	0.93	0.94
2,001-2,500 sq. ft.	1.04	1.02	1.01
2,501-3,000 sq. ft.	1.08	1.07	1.07
3,001-3,500 sq. ft.	1.11	1.16	1.12
3,501-4,000 sq. ft.	1.13	1.13	1.11
4,001 sq. ft. or more	1.17	1.13	1.11
Average, All Units	1.00	1.00	1.00
3,001 sq. ft. or more	n/a	1.14	1.11

Note: EDU multipliers by unit size are ratios of average household size to overall average household size for all single-family detached units.

Source: 2008 study data from Duncan Associates, *Impact Fee Capital Improvements Plan and Land Use Assumptions for the City of Santa Fe, 2008*; American Housing Survey data for units built 1990 or later from the *2011 American Housing Survey*.

The national and regional data are consistent with the 2008 study results for units up to 3,500 square feet. However, the national and regional data clearly show that household size plateaus at about 3,000 square feet. It is recommended that updated average household sizes by unit size categories be based on American Housing Survey data and that the upper size category include all units larger than 3,000 square feet, as shown in Table 65.

A similar approach is used to determine average household sizes for accessory or guest units built as attached or detached additions to single-family units. The current ordinance provides for fees that vary by the size of the guest unit, but the basis for these fees is unclear. In general, the multi-family fee would be reasonable to use for guest units, but consideration could be made for smaller guest units. Analysis of American Housing Survey data indicates that guest units of 750 square feet or less would have somewhat fewer residents than the average of all multi-family units, as shown in Table 65.

Table 65. Single-Family Average Household Size by Unit Size

Single-Family Unit Size (Heated Living Area)	EDU Multiplier	Avg. HH Size
1,500 sq. ft. or less	0.89	1.95
1,501-2,000 sq. ft.	0.93	2.04
2,001-2,500 sq. ft.	1.02	2.23
2,501-3,000 sq. ft.	1.07	2.35
3,001 sq. ft. or more	1.14	2.50
All Single-Family Detached	1.00	2.19
Guest Unit, 750 sq. ft. or less	0.76	1.66

Source: EDU multipliers for western U.S. from Table 64 (EDU multiplier for guest house of 750 sq. ft. or less derived from American Housing Survey data for multi-family units built in the Western Region in 1990 or later from the *2011 American Housing Survey*); average household size for all single-family detached units in Santa Fe from Table 63; household sizes by unit size for Santa Fe based on EDU multipliers.

APPENDIX C: FUNCTIONAL POPULATION

As previously mentioned, this study modifies the approach for determining service demand for fire/EMS and police impact fee calculations from a service call basis to a “functional population” approach. Under this approach, functional population is calculated for each major land use and then converted into “equivalent dwelling units.” The equivalent dwelling unit, or EDU, represents the impact of a typical single-family dwelling on the demand for police and fire/EMS services.

To a large extent, the demand for police and fire/EMS functions are proportional to the presence of people. The functional population concept is analogous to the concept of “full-time equivalent” employees. It represents the number of “full-time equivalent” people present at the site of a land use.

The residential functional population is considerably simpler than the nonresidential component. It is assumed that people spend 12 hours per day at home during week days and 20 hours per day during weekends. In total, people are assumed to spend 100 hours per week, or 60 percent of their time, at home. The other 40 percent of their time spent away from home accounts for working, shopping and other away-from-home activities. For residential uses, then, equivalent dwelling units are calculated by first multiplying average household size by 60 percent to determine functional population per unit. The functional population per unit multipliers for residential uses are shown in Table 66.

Table 66. Residential Functional Population per Unit

Housing Type	Unit	Average HH Size	Occupancy	Func. Pop./Unit
Single-Family, Detached (All)	Dwelling	2.19	0.60	1.314
Less than 1,500 sf	Dwelling	1.95	0.60	1.170
1,500 to 1,999 sf	Dwelling	2.04	0.60	1.224
2,000 to 2,499 sf	Dwelling	2.23	0.60	1.338
2,500 to 2,999 sf	Dwelling	2.35	0.60	1.410
3,000 sf or greater	Dwelling	2.50	0.60	1.500
Guest Unit, 750 sf or less	Dwelling	1.66	0.60	0.996
Multi-Family	Dwelling	1.90	0.60	1.140
Mobile Home/RV Park	Pad/Space	3.04	0.60	1.824

Source: Overall single-family, multi-family and mobile home average household size from Table 63; single-family average household size by housing size from Table 65; occupancy factor estimated (see text above).

Nonresidential Functional Population

The functional population methodology for nonresidential uses is based on trip generation data utilized in developing the transportation demand schedule prepared for the updated transportation impact fee update. Functional population per 1,000 square feet is derived by dividing the total number of hours spent by employees and visitors during a weekday by 24 hours. Employees are estimated to spend eight hours per day at their place of employment, and visitors are estimated to spend one-half to one hour per visit depending on land use. The formula used to derive the nonresidential functional population estimates is summarized in Figure 7.

Figure 7. Nonresidential Functional Population Formula

Functional population/1000 sf = (employee hours/1000 sf + visitor hours/1000 sf) ÷ 24 hours/day

Where:

Employee hours/1000 sf = employees/1000 sf x 8 hours/day

Visitor hours/1000 sf (retail/office/public) = visitors/1000 sf x 1 hour/visit

Visitors hours/1000 sf (industrial/warehouse) = visitors/1000 sf x 1/2 hour/visit

Visitors/1000 sf = ADT/1000 sf x avg. vehicle occupancy - employees/1000 sf

ADT/1000 sf = average daily trips (1/2 trip ends) on a weekday per 1000 sf

Using this formula and information on trip generation rates used in this study for the transportation impact fee update, vehicle occupancy rates from the *National Household Travel Survey* and other sources and assumptions, nonresidential functional population estimates per 1,000 square feet of gross floor area are calculated. Table 67 presents the results of these calculations for a number of nonresidential land use categories.

Table 67. Nonresidential Functional Population per Unit

Land Use	Unit	Trip Rate	Persons/Trip	Employee/Unit	Visitors/Unit	Functional Pop./Unit
Retail/Commercial	1,000 sq. ft.	21.35	1.96	1.02	40.83	2.041
Office	1,000 sq. ft.	5.52	1.24	2.31	4.53	0.959
Industrial	1,000 sq. ft.	3.42	1.24	1.05	3.19	0.416
Warehouse	1,000 sq. ft.	1.78	1.24	0.43	1.78	0.180
Mini Warehouse	1,000 sq. ft.	1.25	1.24	0.43	1.12	0.167
Public/Institutional	1,000 sq. ft.	3.80	1.86	1.95	5.11	0.863

Source: Trip rates are one-half trip ends from Table 14; persons/trip is average vehicle occupancy from Federal Highway Administration, *Nationwide Household Travel Survey*, 2009; employees/unit from U.S. Department of Energy, *Commercial Buildings Energy Consumption Survey*, 2003; visitors/unit is trips times persons/trip minus employees/unit; functional population/unit calculated based on formula from Figure 7.

Functional Population Summary

The functional population multipliers for the residential and nonresidential land use categories are summarized in Table 68.

Table 68. Functional Population Multipliers

Land Use	Unit	Functional Pop./Unit
Single-Family, Detached (All)	Dwelling	1.314
Less than 1,500 sf	Dwelling	1.170
1,500 to 1,999 sf	Dwelling	1.224
2,000 to 2,499 sf	Dwelling	1.338
2,500 to 2,999 sf	Dwelling	1.410
3,000 sf or greater	Dwelling	1.500
Guest Unit, 750 sf or less	Dwelling	0.996
Multi-Family	Dwelling	1.140
Mobile Home/RV Park	Pad/Space	1.824
Retail/Commercial	1,000 sq. ft.	2.041
Office	1,000 sq. ft.	0.959
Industrial	1,000 sq. ft.	0.416
Warehouse	1,000 sq. ft.	0.180
Mini Warehouse	1,000 sq. ft.	0.167
Public/Institutional	1,000 sq. ft.	0.863

Source: Residential dwelling unit functional population per unit from Table 66; nonresidential functional population per unit from Table 67.

Existing and projected total functional population for the Urban Area are derived based on existing and projected land uses from the Land Use Assumptions and functional population per unit multipliers summarized above. The results are displayed in Table 69.

Table 69. Total Functional Population, 2014-2020

Land Use	Unit	No. of Units	Functional Pop.	
			per Unit	Total
Existing (2014)				
Single-Family Detached	Dwelling	29,500	1.314	38,763
Multi-Family	Dwelling	9,700	1.140	11,058

APPENDIX E: OUTSTANDING DEBT

The City of Santa Fe's outstanding gross receipts tax (GRT) and general obligation (GO) bonds are summarized in Table 72. The 2013 GO bonds and the portion of the 2012A GRT bonds not used for refunding are not included, because none of the projects funded by these bond issues have been included in the existing facility inventories for the road, park, fire and police impact fee analyses. The debt for land acquisition for general government purposes, convention center, solid waste, wastewater and the Railyard are unrelated to the impact fee facilities and are excluded from the remainder of this analysis.

Table 72. Outstanding Non-Utility Debt Summary

Bond Issue	Purpose	Original	Outstanding
GRT Rev. Bonds 2006A	CIP	\$17,710,000	\$3,045,000
GRT Rev. Bonds 2008	CIP	\$20,135,000	\$19,840,000
GRT Refunding Bonds 2010A	Refund 2002	\$15,005,000	\$9,415,000
GRT Refunding Bonds 2012A*	Refund 2004A	\$14,390,000	\$14,390,000
GRT Rev. Bonds 2012A*	CIP	\$18,335,000	\$18,335,000
GRT Refunding Bonds 2013A	Refund 2006A	\$10,880,000	\$10,880,000
MRC 2005 Refunding Bonds	Parks	\$15,315,000	\$9,165,000
NMFA - Land Acquisition	Land Purch.	\$3,610,000	\$2,965,784
Total from 1/2% GRT		\$115,380,000	\$88,035,784
General Obligation 2008	Parks	\$20,000,000	\$17,070,000
General Obligation 2010	Parks	\$10,300,000	\$9,440,000

GRT Rev Bonds 2012C	Market Station	\$4,685,000	\$4,685,000
Total from Railyard GRT		\$28,955,000	\$28,250,000

* \$32,725,000 bond split between refunding and new capital projects

Source: City of Santa Fe Finance Department, October 15, 2013.

The outstanding debt amounts attributable to refunding issues, as well as to original issues that funded a variety of improvement types, are allocated among facility types based on the original planned project costs for each bond issue. Only debt that was incurred for capacity-expanding improvements is included. The analysis of the individual bond issues is provided at the end of this appendix. The resulting distributions by facility type are summarized in Table 73.

Table 73. Distribution of Debt by Facility Type

Bond Issue	Streets	Parks	Police	Fire	Other	Total
Planned Project Costs						
GRT Revenue Bonds 2002	\$250,000	\$0	\$0	\$150,000	\$17,595,000	\$17,995,000
GRT Revenue Bonds 2004 A	\$2,200,000	\$3,960,000	\$0	\$1,700,000	\$10,800,000	\$18,660,000
GRT Revenue Bonds 2006 A	\$1,740,000	\$3,900,000	\$670,000	\$460,000	\$11,730,000	\$18,500,000
MRC 2005 Refunding	\$0	\$6,126,000	\$0	\$0	\$9,189,000	\$15,315,000
GRT Rev. Bonds 2008	\$1,200,000	\$2,450,000	\$2,000,000	\$2,200,000	\$12,285,000	\$20,135,000
GRT Rev. Bonds 2012A	\$430,000	\$2,300,000	\$0	\$0	\$19,270,000	\$22,000,000
Percentage of Bond Project Cost						
GRT Revenue Bonds 2002	1.4%	0.0%	0.0%	0.8%	97.8%	100.0%
GRT Revenue Bonds 2004 A	11.8%	21.2%	0.0%	9.1%	57.9%	100.0%
GRT Revenue Bonds 2006 A	9.4%	21.1%	3.6%	2.5%	63.4%	100.0%
MRC 2005 Refunding	0.0%	40.0%	0.0%	0.0%	60.0%	100.0%
GRT Rev. Bonds 2008 - CIP	6.0%	12.2%	9.9%	10.9%	61.0%	100.0%
GRT Rev. Bonds 2012A (CIP)	2.0%	10.5%	0.0%	0.0%	87.6%	100.0%

Source: Original planned project costs from the following tables: GRT 2002 (Table 75), GRT 2004A (Table 76), GRT 2006A (Table 77), GRT 2008 (Table 78) and GRT 2012A (CIP portion, Table 79); MRC 2005 refunding bond issued to refund the 1996C and 1998 MRC bonds that were used for parks (60% attributed to golf courses per City of Santa Fe Finance Department, August 15, 2002 – classified as “other”).

The distributions from the table above are multiplied by the total outstanding debt for those mixed-facility bond issues to determine outstanding debt for each impact fee facility type.

Table 74. Outstanding Debt by Facility Type

Bond Issue (Refunded Issue)	Streets	Parks	Police	Fire	Total
GRT Refunding 2010A (2002)	\$131,810	\$0	\$0	\$75,320	\$9,415,000

APPENDIX F: LAND USE ASSUMPTIONS

Santa Fe Urban Area

Impact Fee Land Use Assumptions

2014–2020

City of Santa Fe
Housing & Community Development Department
Long Range Planning Division
August, 2013

INTRODUCTION

This report provides land use assumptions (growth projections) for the Santa Fe Urban Area, a unified service area, within which the city is planning to annex land and therefore expend impact fee monies for eligible capital improvement projects (see map). The New Mexico *Development Fees Act* (§§ 5-8-1 through 5-8-43, N.M.S.A. 1978), specifies that land use assumptions must be adopted for a period of at least five years. These land use assumptions cover a period of seven years from the beginning of 2014 through the end of 2020.

The projections assume that urban area growth through 2020 will generally reflect slower growth than occurred during the last decade (2000-2010), due to the slow recovery from the depth of the Great Recession and slower population growth.

Residential and Non-Residential Development, 2014–2020

The following table summarizes anticipated growth from the beginning of 2014 through 2020.

Table 1. Residential & Non-Residential Development, 2014–2020

<i>Housing Units</i>				
	<u>2014</u>	<u>Added</u>	<u>2020</u>	<u>(Annual Avg.)</u>
City/Urban Area Total	44,400	2,100	46,500	300
<i>Population</i>				
	<u>2014</u>	<u>Added</u>	<u>2020</u>	<u>(Annual Avg.)</u>
City/Urban Area Total	86,500	3,500	90,000	500
<i>Housing Units, By Type</i>				
	<u>2014</u>	<u>Added</u>	<u>2020</u>	<u>(Annual Avg.)</u>
Single-Family (Detached, Attached)	29,500	1,750	31,250	250
Multi-Family	9,700	350	10,050	50
Mobile Homes	<u>5,200</u>	<u>0</u>	<u>5,200</u>	<u>0</u>
City/Urban Area Total	44,400	2,100	46,500	300
<i>Commercial Development (square feet of gross floor area)</i>				
<u>Land Use Category</u>	<u>2014</u>	<u>Added</u>	<u>2020</u>	<u>(Annual Avg.)</u>
Retail	10,198,000	700,000	10,898,000	100,000
Office	8,972,000	350,000	9,322,000	50,000
Industrial	4,360,000	105,000	4,465,000	15,000
Institutional	<u>2,960,000</u>	<u>70,000</u>	<u>3,030,000</u>	<u>10,000</u>
Commercial Total	26,490,000	1,225,000	27,715,000	175,000

Housing & Population Assumptions

Housing in the city/urban area will continue to grow slowly based on continued lower demand for new housing both from within the community and from those moving here from other places. Larger master-planned developments in the city will continue to account for much of the new housing. Projections of population growth are based on assumptions about the average number of new housing units built each year and the number of occupants in each new unit. The overall average number of occupants in each new housing unit is projected to be 1.67.

Commercial Assumptions

Commercial construction, which for these purposes includes all non-residential construction, is projected to continue at a modest, but healthy, annual average of 175,000 square feet. This represents the annual average of new commercial development from 2006-2012. Though much of this period includes the Great Recession, it is anticipated that an oversupply of commercial floor area leading up to the recession and the increase of computer-based retail sales will keep the annual levels of construction of commercial space moderate through the rest of the decade.

Historical Housing and Population Growth, 2000-2010

From 2000–2010, city population growth represented nearly all of the urban area growth, a dramatic change from the 1990s when the city accounted for less than half of the total urban area population growth. Meanwhile, city housing growth represented 97% of total urban area housing growth from 2000–2010 (compared to only 73% during the 1990s). When comparing the 2000 and 2010 Census, the city and urban area experienced the following population and housing growth:

Note: In the future, comparisons between the “city” and “urban area” may be unnecessary as the city annexes most of the urban area. The Agua Fria Traditional Historic Community (2,800 residents and 1,134 housing units; 2010 Census) located within the urban area is expected to remain part of county jurisdiction.

Table 2. Population & Housing Growth, 2000-2010

	Total Population		2000-2010 Growth	Annual Average	Urban Area Growth
	2000	2010			
City of Santa Fe	62,203	67,947	+5,744	574	99%
Outside the City	16,897	16,930	+ 33	3	1%
Urban Area Total	79,100	84,877	+5,777	577	100%

	Total Housing Units		2000-2010 Growth	Annual Average	Urban Area Growth
	2000	2010			
City of Santa Fe	30,533	37,200	+6,667	667	97%
Outside the City	6,046	6,205	+ 159	16	3%
Urban Area Total	36,579	43,405	+6,826	683	100%

	Persons per Housing Unit		
	2000	2010	
City of Santa Fe	2.04	1.82	<i>(not Persons-per-Household)</i>
Outside the City	2.79	2.73	
Urban Area Total	2.16	1.95

APPENDIX G: CAPITAL FACILITY PLANS

Table 80. Planned Major Road Improvements, 2014-2020

Project Name	Location	Cost Estimate
Cerrillos Rd, Phase IIC	Camino Carlos Rey to St. Michaels Dr.	\$10,300,000
Calle P'o Ae Pi	Airport Road to Rufina St.	\$500,000
Bike Lanes/Sidewalks	Reconstruction / Expansion	\$4,000,000
Rufina St.	Harrison Rd. to Camino Carlos Rey	\$500,000
West Alameda St.	La Joya Road to Siler Road	\$3,000,000
Zia Station Infrastructure	Zia Road Rail Station	\$300,000
Total, Road Improvements		\$18,600,000
Agua Fria / South Meadows		\$1,000,000
Agua Fria / Cottonwood		\$1,000,000
Airport Road / Ca P'o Ae Pi		\$350,000
Airport Road / Jemez		\$100,000
Cerrillos / Sandoval / Manhattan		\$1,000,000
Galisteo / St. Michaels		\$350,000
Galisteo / Rodeo		\$350,000
Galisteo / San Mateo		\$350,000
Paseo de Peralta / Marcy		\$350,000
Rufina / Ca P'o Ae Pi		\$350,000
Rufina / Lopez		\$500,000
Sandoval / Montezuma		\$500,000
Total, Intersection/Signalization Improvements		\$6,200,000
Total, All Road Projects		\$24,800,000

Table 81. Planned Park/Trail Improvements, 2014-2020

Project Name	Cost Estimate
Colonia Prisma Park	\$50,000
Las Acequias Park Phase 2	\$89,000
Los Soleras Park	\$7,250,000
Nava Ade Park Development (Phase 2- South Park)	\$2,115,000
San Isidro Park	\$20,000
Southwest Activity Node (SWAN - Tierra Contenta) Ph 2-4	\$18,670,000
Small Parks (new)	\$500,000
Play Equipment (new)	\$200,000
Neighborhood & Community Park, Subtotal	\$28,894,000
Acequia Trail - Underpass at St. Francis/Cerrillos	\$3,500,000
Acequia Trail - Otowi Rd. to Harrison Rd.	\$535,000
Arroyo Chamiso Trail - Villa Linda Park to Governor Miles Road	\$610,000
Cañada Rincon Trail - Calle Mejia to Cam. Francisca/Ave. Rincon	\$250,000
Dale Ball Trail Improvements and Extensions	\$50,000
La Tierra Trail - Connections to Camino de las Crucitas & Montoyas	\$800,000
MRC Trail Improvements and Extension	\$225,000
Rail Trail - Pen Road to Alta Vista	\$660,000
River Trail & Parkway - St. Francis Drive to Canyon Road	\$1,000,000
Tierra Contenta Trail - Buffalo Grass Road to Camino Entrada	\$600,000
Trails, Subtotal	\$8,230,000
Parks & Trails, Total	\$37,124,000

memo

DATE: July 2, 2020

TO: Capital Improvements Advisory Committee

FROM: Carlos Gemora, Senior Land Use Planner, CIAC Liaison

SUBJECT: 2020 - CIAC MEETING SCHEDULE

ACTION REQUESTED

I am requesting that the Capital Improvements Advisory Committee (CIAC) meetings be set for 2020 on the dates below and plan to hold meeting times from 1:00-3:00 p.m.

Thursday, July 9 (Confirmed)
Thursday, August 27
Thursday, October 8
Thursday, November 12
